Social Security: The Cost-of-Living Adjustment in January 2002

David Koitz and Geoffrey Kollmann Updated by Gary Sidor Domestic Social Policy Division

Summary

To compensate for the effects of inflation, Social Security recipients receive a costof-living adjustment (COLA) in January of each year. The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W), updated monthly by the Department of Labor's Bureau of Labor Statistics (BLS), is the measure used to compute the change. The Social Security COLA is based on the percentage change in the average CPI-W for the third calendar quarter of the previous year to the third calendar quarter of the current year. The COLA becomes effective in December of the current year and is payable in January of the following year (Social Security checks always reflect the benefits due for the preceding month).

The 2.6% COLA payable in January 2002 was triggered by the rise in the CPI-W from the third quarter of 2000 to the third quarter of 2001. This COLA triggers identical percentage increases in Supplemental Security Income (SSI), veterans' pensions, and railroad retirement benefits, and causes other changes in the Social Security program. Although COLAs under the federal Civil Service Retirement System (CSRS) and the federal military retirement program are not triggered by the Social Security COLA, these programs use the same measuring period and formula for computing their COLAs. Their recipients also receive a 2.6% COLA in January 2002. This report is updated annually.

How the Social Security COLA Is Determined

An automatic Social Security benefit increase reflects the rise in the cost of living over roughly a 1-year period. The CPI-W, updated monthly by the BLS, is the measure used to compute the change. The Social Security COLA is based on the percentage change in the average CPI-W for the third calendar quarter of the previous year to the third calendar quarter of the current year. The COLA becomes effective in December of the current year and is payable in January of the following year (Social Security checks always reflect the benefits due for the preceding month).

The January 2002 COLA

The January 2002 COLA became known on October 19, 2001, when the BLS announced the September 2001 CPI-W figure. With release of the September 2001 index, the two July-September sets of CPI-W figures needed to compute the COLA (one for 2000 and another for 2001) became available. Table 1 shows how the January 2002 COLA is computed under procedures set forth in section 215(i) of the Social Security Act.

Table 1. Computation of the Social Security COLA, January 2002
--

	CPI-W Index Points	
July 2000	169.4	
August 2000	169.3	
September 2000	170.4	
Average for Third Quarter of 2000 (rounded to the nearest one-tenth of one percent):	169.7	
July 2001	173.8	
August 2001	173.8	
September 2001	174.8	
Average for Third Quarter of 2001(rounded to the nearest one-tenth of one percent):	174.1	
Percentage increase from the third quarter average for 2000 to the third quarter average for 2001 (rounded to the nearest one-tenth of one percent as required by law):	174.1 - 169.7 = 4.4 4.4 / 169.7 = 2.593% COLA = 2.6%	

Source: BLS data series for the CPI-W for 2000 and 2001.

Note: The reference base period for the CPI-W is 1982-1984, i.e., the period when the index equaled 100.

What Else Is Affected Besides Social Security Benefits?

Social Security COLAs trigger increases in other programs. SSI benefits, veterans' pension benefits, and railroad retirement "tier 1" benefits (equivalent to a Social Security benefit) are increased by the same percentage as the Social Security COLA. Railroad retirement "tier 2" benefits (equivalent to a private pension) are increased by 32.5% of the percentage increase applicable to "tier 1" COLAs. Although COLAs under the CSRS and the federal military retirement system are not triggered by the Social Security COLA, these programs use the same measuring period and formula for computing their COLAs. Their recipients also receive a 2.6% COLA in January 2002.¹ The COLA also triggers other

¹ For retirees under the Federal Employees' Retirement System (FERS), a different formula is applied and the resulting increases may differ.

changes in the Social Security program including the following items indexed to the increase in national average wages:

Taxable earnings base. The Social Security (or Old-Age, Survivors, and Disability Insurance — OASDI) taxable earnings base (the maximum amount of annual earnings subject to Social Security taxes) will increase to \$84,900 in 2002 (from 80,400 in 2001).

Exempt amounts under the Social Security earnings test. The exempt amount under the earnings test (the maximum annual amount a Social Security recipient can earn from work and still receive full benefits) will rise to \$11,280 in 2002 (up from \$10,680 in 2001) for persons who are below the full retirement age (FRA) and will not reach the FRA during the year. (Currently, the FRA is age 65. Beginning in 2003, the FRA will increase gradually, reaching 66 in 2009 and 67 in 2027. The ages at which the earnings test applies will increase accordingly.) Under the Senior Citizens' Freedom to Work Act (P.L. 106-182), effective January 1, 2000, the earnings test no longer applies to recipients beginning in the month they reach the FRA. During the *year* in which a recipient reaches the FRA, an annual exempt amount still applies for months preceding the attainment of the FRA. Under the law, the exempt amount is \$30,000 in 2002, and will rise thereafter in proportion to the increase in national average wages.

Although not triggered by COLAs, other changes are tied to the increase in national average wages. In 2002, the amount of earnings needed for a Social Security "quarter-of-coverage" is \$870 (up from \$830 in 2001). The coverage threshold for election workers is \$1,200 (up from \$1,100 in 2001), while the threshold for domestic workers remains unchanged at \$1,300. The monthly substantial gainful activity amount for the non-blind disabled is \$780 (up from \$740 in 2001), and the amount for the blind disabled is \$1,300 (up from \$1,240 in 2001).

Tables 2 and 3, below, show the history of increases in Social Security benefits and taxable earnings bases. Table 4 shows the effect of the 2001 COLA on benefits.

^a The HI taxable earnings base was eliminated by the Omnibus Budget Reconciliation Act of 1993. In 1991, it was raised to \$125,000 as a revenue-raising measure in the Omnibus Budget Reconciliation Act of 1990.

^b 1966 was first year in which the HI tax was levied.

	Before 2.6% COLA	After 2.6% COLA			
Average Social Security monthly benefit levels:					
All retired workers	\$852	\$874			
Aged couple, both receiving benefits	\$1,418	\$1,454			
Widowed mother and two children	\$1,719	\$1,764			
Aged widow(er) alone	\$820	\$841			
All disabled workers	\$794	\$815			
Disabled worker, spouse, and one or more children	\$1,325	\$1,360			
SSI federal monthly payment standard:					
Individual	\$531	\$545			
Couple	\$796	\$817
