Agricultural Export and Food Aid Programs

SUMMARY

The U.S. Department of Agriculture (USDA) forecasts that FY2003 agricultural exports will be \$57 billion. Projected imports of \$43 billion will result in an export surplus of \$14 billion, which represents an annual increase in the trade balance of \$1.7 billion.

The 2002 farm bill (P.L. 107-171), the Farm Security and Rural Investment Act (FSRIA), and permanent legislation authorize four kinds of federal programs to support agricultural exports: direct subsidies, market promotion, export credit guarantees, and foreign food aid. Legislative authority for most of these programs now expires at the end of 2007. Export subsidies, but not other types of export and food aid programs, are subject to reduction commitments included in the 1994 Uruguay Round Agreement on Agriculture (URAA).

Direct subsidies include the Export Enhancement Program (EEP) and the Dairy Export Incentive Program (DEIP). EEP spending has been negligible since 1996. DEIP spending, however, has been at the maximum allowed under the Uruguay Round Agreement.

Market promotion programs include the Market Access Program (MAP) and the Foreign Market Development or "Cooperator" Program (FMDP). Considered to be non-trade distorting, these programs are exempt from Uruguay Round reduction commitments. The

FSRIA increases MAP to \$200 million annually by FY2006; and sets FMDP spending at \$34.5 million annually.

The FSRIA authorizes export credit guarantees of \$5.5 billion annually plus an additional \$1 billion for emerging markets through 2007. Actual levels guaranteed depend on economic conditions and the demand for financing by eligible countries. Export credit guarantees also are not subject to multilateral disciplines or reduction commitments.

The FSRIA also authorizes P.L. 480 Food for Peace programs and Food for Progress through FY2007. Section 416(b), permanently authorized in the Agricultural Act of 1949, provides for overseas commodity donations. Extensive use has been made of Section 416(b) commodity donations in the various recent food aid initiatives and in responding to humanitarian food needs in Afghanistan.

The President's FY2003 budget proposed phasing out Section 416(b) commodity donations in 2003 and increasing P.L. 480 food aid. However, House and Senate Appropriations Committees expressed disagreement with phasing out Section 416(b). Export subsidies, export credit programs, and food aid also are on the agenda of agricultural negotiations in the World Trade Organization.

MOST RECENT DEVELOPMENTS

Agricultural export and food aid programs that require appropriations are operating under a continuing resolution (P.L. 107-294) which funds government spending at FY2002 levels. H.J.Res. 1 passed the House on January 8, 2003 and would fund programs at FY2002 levels through January 31, 2003.

On August 28, 2002, the Secretary of Agriculture announced the release of 300,000 tons of wheat from the Bill Emerson Humanitarian Trust to meet urgent but unanticipated humanitarian food needs in southern Africa. A release of 275,000 tons of wheat from the Trust was announced on June 10, 2002.

The House Appropriations Committee, which marked up FY2003 agriculture appropriations on (H.R. 5263, H. Rept. 107-623) June 11, 2002, recommended budget authority of \$1.491 billion for USDA international programs. The Senate Appropriations Committee marked up its version of agriculture appropriations (S. 2801, S. Rept., 107-223) and recommended \$1.464 billion in budget authority.

President Bush signed into law the Farm Security and Rural Investment Act (P.L. 107-171) on May 13, 2002. The FSRFA reauthorizes most agricultural export and food aid programs through FY2007. The Senate passed its version of the farm bill (S. 1731) on February 13, 2002, the House passed its version (H.R. 2646) on October 5, 2001.

On February 4, the President transmitted his FY2003 budget proposals to Congress. The budget proposed budget authority of \$1.453 (to support a program level of \$6.45 billion) for USDA's export and food aid programs. The budget also proposed phasing out food aid donations that rely on the use of surplus commodities from the Commodity Credit Corporation.

BACKGROUND AND ANALYSIS

U.S. Agricultural Exports

Agricultural exports are important both to farmers and to the U.S. economy. Production from more than a third of harvested acreage is exported, including an estimated 43.5% of wheat, 53.3% of rice, 43.1% of soybeans and products, 20.1% of corn, and 45.3% of cotton. About 18% of the value of agricultural production is exported and around 25% of gross farm income comes from exports. Exports generate economic activity in the non-farm economy as well. According to USDA, each \$1.00 received from agricultural exports stimulates another \$1.47 in supporting activities to produce those exports. Agricultural exports generated an estimated 740,000 full-time civilian jobs, including 444,000 jobs in the non-farm sector in 1998. In contrast to the continuing overall trade deficit, U.S. agricultural trade has consistently registered a positive balance.

Nearly every state exports agricultural commodities, thus sharing in export-generated employment, income, and rural development. In 1999, the states with the greatest shares in U.S. agricultural exports by value were California, Iowa, Nebraska, Kansas, Illinois, Texas, Minnesota, Washington, Indiana, and Wisconsin. These 10 states accounted for 56% of total U.S. agricultural exports. In addition, Arkansas, North Carolina, Ohio, Florida, Missouri, Georgia, North Carolina, and South Dakota each shipped over \$1 billion worth of commodities.

After growing rapidly in the 1970s, U.S. agricultural exports reached a high of \$43.8 billion in FY1981, but then declined by 40% to just \$26.3 billion by FY1986. By FY1995, agricultural exports had recovered and reached a new peak of \$54.6 billion. Agricultural exports reached nearly \$60 billion in FY1996, but declined to \$57.3 billion in FY1997. U.S. agricultural exports declined further in FY1998 to \$53.6 billion. Main reasons for the decline were financial difficulties and an economic slow-down in East and Southeast Asian countries, and increased competition for global corn, wheat, and soybean markets. For the same reasons, exports fell in FY1999 to \$49 billion. They rose to an estimated \$50.9 billion for FY2000. USDA reports that FY2001 exports were \$53 billion and estimates that exports increased only slightly to \$53.5 billion in FY2002. USDA forecasts FY2003 exports at \$57 billion, a \$3.7 billion increase over FY2002.

The commodity composition of U.S. agricultural exports has changed over time with exports of high value agricultural products now exceeding those of bulk commodities. Since FY1991, bulk commodities (grains, oilseeds, and cotton) have accounted for less than total non-bulk exports (intermediate products such as wheat flour, feedstuffs, and vegetable oils or consumer-ready products such as fruits, nuts, meats, and processed foods). In FY2001, high value agricultural exports accounted for 65% of the value of total agricultural exports.

Many variables interact to determine the level of U.S. agricultural exports: income, population growth, and tastes and preferences in foreign markets; U.S. and foreign supply and prices; and exchange rates. U.S. agricultural export and food aid programs, domestic farm policies that affect price and supply, and trade agreements with other countries also influence the level of U.S. agricultural exports.

Agricultural Export and Food Aid Programs

The trade title of the 2002 FSRIA (Title III of P.L. 107-171) authorizes and amends four kinds of export and food aid programs:

- ! Direct export subsidies;
- ! Export Promotion Programs;
- ! Export credit guarantees; and
- ! Foreign food aid.

USDA's Foreign Agricultural Service (FAS) administers the export and food aid programs, with the exception of P.L. 480 Titles II (humanitarian food aid) and III (food for development), which are administered by the U.S. Agency for International Development (USAID).

For the current fiscal year, FY2002, USDA appropriations legislation (P.L. 107-76, H.R. 2330) provides budget authority of \$1.124 billion to support a program level for international activities at an estimated \$6.6 billion. The large difference between program level (the gross value of commodities and services provided by USDA) and budget authority (the funds authorized by Congress to carry out the programs) is mainly attributable to the large part played by credit programs (especially export credit guarantees) in USDA's international activities. For credit programs, only costs represented by administrative expenses and loan subsidies (not the value of the exports which are financed by the private sector) require authorization of budget authority. Moreover, export subsidies, export market development and some food aid donations are funded not by direct annual appropriations, but by borrowing from USDA's Commodity Credit Corporation (CCC) and also do not require budget authority.

Export Subsidies

The FSRIA authorizes direct export subsidies of agricultural products through the Export Enhancement Program (EEP) and the Dairy Export Incentive Program (DEIP).

Export Enhancement Program (EEP). EEP was established in 1985, first by the Secretary of Agriculture under authority granted in the Commodity Credit Corporation Charter Act, and then under the Food Security Act of 1985 (P.L. 99-198). The program was instituted after several years of declining U.S. agricultural exports and a growing grain stockpile. Several factors contributed to the fall in exports during the early 1980s: an overvalued dollar and high commodity loan rates under the 1981 farm bill made U.S. exports relatively expensive for foreign buyers; global recession reduced demand for U.S. agricultural products; and foreign subsidies, especially those of the European Union (EU), helped competing products make inroads into traditional U.S. markets. EEP's main stated rationale was to combat "unfair" trading practices of competitors in world agricultural markets.

The Office of the General Sales Manager in USDA's Foreign Agricultural Service (FAS) operates EEP. The Sales Manager announces target countries and amounts of commodities to be sold to those countries, and then invites U.S. exporters to "bid" for bonuses that effectively lower the sales price. An exporter negotiates a sale with a foreign importer, calculates the bonus necessary to meet the negotiated price, and submits the bonus and price to FAS. FAS awards bonuses based on the bids and amount of funding available. Initially awarded in the form of certificates for commodities owned by the CCC, bonuses since 1992 have been in the form of cash.

Most EEP bonuses have been used to assist sales of wheat. In FY1995, the last year with significant program activity, 72% of EEP sales were wheat, 8% flour, 6% poultry, and the remaining sales were eggs, feed grains, pork, barley malt, and rice. Although many exporters have received bonuses, since 1985 three exporting firms have received almost half of the total, which now exceeds \$7 billion. The former Soviet Union, Egypt, Algeria, and China were major beneficiaries of EEP subsidies.

The United States agreed to reduce its agricultural export subsidies under the 1994 Uruguay Round Agreement on Agriculture. The Agreement requires that outlays for export subsidies fall by 36% and the quantities subsidized by 21% over 6 years (1995-2001). Legislation to implement the Uruguay Round Agreement (P.L. 103-465) reauthorized EEP through the year 2001 and specified that EEP need not be limited to responses to unfair trade practices as in the 1985 Food Security Act, but also could be used to develop export markets.

EEP has been a controversial program since it was initiated in 1985. Many oppose the program outright on grounds of economic efficiency. EEP, they argue, like all export subsidies, interferes with the operations of markets and distorts trade. Others, noting that the Uruguay Round Agreement on Agriculture restricts but does not prohibit agricultural export subsidies, point out that as long as competitors, such as the European Union, use export subsidies, the United States should also be prepared to use them. The effectiveness of EEP also has been an issue. Several studies have found that wheat exports would decline somewhat if EEP were eliminated, suggesting that EEP increases wheat exports. Other analysts, however, find that subsidized wheat exports under EEP displace exports of

unsubsidized commodities such as corn. Some critics suggest EEP subsidies should target different products and country markets such as high value or value-added products in Asia or Latin America. For more information, see CRS Report RS20399, *Agricultural Export Programs: The Export Enhancement Program (EEP)*.

Dairy Export Incentive Program (DEIP). DEIP was established under the 1985 farm act to assist exports of U.S. dairy products. Its purpose was to counter the adverse effects of foreign subsidies, primarily those of the European Union. Early bonus payments were in the form of sales from CCC-owned dairy stocks; later they were generic commodity certificates from CCC inventories; now they are cash payments. As with EEP, USDA announces target countries and amounts of dairy products that may be sold to those countries under the program. Exporters negotiate tentative sales and “bid” for bonuses to subsidize the prices of the sales.

The Uruguay Round subsidy reduction commitments (see EEP above) apply also to DEIP. Uruguay Round implementing legislation authorized DEIP through the year 2001. The 1996 FAIR Act extended DEIP authority to FY2002, and FSRIA reauthorizes DEIP through 2007.

While many oppose subsidizing dairy products for reasons similar to those held by EEP opponents, the program has strong support in Congress. Dairy producers consider DEIP an integral part of U.S. dairy policy, an important adjunct to domestic support programs. That is perhaps why DEIP is reauthorized as part of Title I commodity programs of the FSRIA, not the trade title. For more information see CRS Report RS20402, *Agricultural Export Programs: The Dairy Export Incentive Program (DEIP)*.

Market Promotion

USDA operates two market promotion programs, the Market Access Program (MAP), formerly the Market Promotion Program (MPP) which in its turn had succeeded the Targeted Export Assistance Program (TEA), and the Foreign Market Development Program (FMDP) also know as the “Cooperator” program.

Market Access Program (MAP). TEA, authorized in 1985, was intended to compensate U.S. exporters for markets lost to unfair foreign competition. MPP/MAP is broader: its aim is to help develop foreign markets for U.S. exports.

MAP assists primarily value-added products. The types of activities that are undertaken through MAP are advertising and other consumer promotions, market research, technical assistance, and trade servicing. Nonprofit industry organizations and private firms that are not represented by an industry group submit proposals for marketing activities to the USDA. The nonprofit organizations may undertake the activities themselves or award funds to member companies that perform the activities. After the project is completed, FAS reimburses the industry organization or private company for part of the project cost. About 60% of MAP funds typically support generic promotion (i.e., non-brand name commodities or products), and about 40% support brand-name promotion (i.e., a specific company product).

The FSRIA authorizes MAP through 2007. The funding level for the program (previously capped at \$90 million annually) gradually increases to \$200 million by FY2006. The 2007 farm bill continues restrictions on the recipients of MAP assistance. No foreign for-profit company may receive MAP funds for the promotion of a foreign-made product. No firm that is not classified as a small business by the Small Business Administration may receive direct MAP assistance for branded promotions. Starting in FY1998, USDA's policy has been to allocate all MAP funds for promotion of branded products to cooperatives and small U.S. companies.

Foreign Market Development Program (Cooperator Program). The FSRIA reauthorizes this program with annual funding of \$34.5 million. This program, which began in 1955, is like MAP in most major respects. The purpose of the program is to expand export opportunities over the long term by undertaking activities such as consumer promotions, technical assistance, trade servicing and market research. Like MAP, projects under the Cooperator Program are jointly funded by the government and industry groups, and the government reimburses the industry organization for its part of the cost after the project is finished. Like MAP, the Cooperator Program is exempt from Uruguay Round Agreement reduction commitments. Unlike MAP, which is more oriented toward consumer goods and brand-name products, the Cooperator Program is oriented more toward bulk commodities.

Some of the same issues raised with respect to MAP are also raised about the Cooperator Program and in some cases all the export programs. The basic issue is whether the federal government should have an active role in helping agricultural producers market their products overseas. Some argue that the principal beneficiaries are foreign consumers and that funds could be better spent, for example, to educate U.S. firms on how to export. Program supporters emphasize that foreign competitors, especially EU member countries, spend money on market promotion, and that U.S. marketing programs help keep U.S. products competitive in third-country markets. For more information, see CRS Report RS20415, *Agricultural Export Programs: The Market Access Program and Foreign Market Development Cooperator Program*.

Export Credit Guarantees

The FSRIA reauthorizes USDA-operated export credit guarantee programs, first established in the Agricultural Trade Act of 1978, to facilitate sales of U.S. agricultural exports. Under these programs, private U.S. financial institutions extend financing at interest rates which are at prevailing market levels to countries that want to purchase U.S. agricultural exports and are guaranteed that the loans will be repaid. In making available a guarantee for such loans, the U.S. government, or more specifically, the CCC, assumes the risk of default on payments by the foreign purchasers on loans for U.S. farm exports.

Export Credit Guarantee Programs (GSM-102 and GSM-103). GSM-102 guarantees repayment of short-term financing (6 months to 3 years) extended to eligible countries that purchase U.S. farm products. GSM-103 guarantees repayment of intermediate-term financing (up to 10 years) to eligible countries that purchase U.S. farm products. Eligible countries are those that USDA determines can service the debt backed by guarantees (the "creditworthiness" test). Use of guarantees for foreign aid, foreign policy, or debt rescheduling purposes is prohibited.

The 2002 farm bill authorizes export credit guarantees at \$5.5 billion annually through FY2002, while giving CCC flexibility to determine the allocation between short and intermediate term programs. The actual level of guarantees depends on market conditions and the demand for financing by eligible (i.e., creditworthy) countries. A provision in the statute allows guarantees to be used when the bank issuing the underlying letter of credit is located in a country other than the importing country. The new farm bill continues the provision that minimum amounts of credit guarantees would be made available for processed and high-value products through 2007. The farm bill permits credit guarantees for high-value products with at least 90% U.S. content by weight, allowing for some components of foreign origin. The legislation provides for an additional \$1 billion through 2007 in export credit guarantees targeted to “emerging markets,” countries that are in the process of becoming commercial markets for U.S. agricultural products.

The General Sales Manager in FAS administers GSM-102 and -103. U.S. financial institutions providing loans to countries for the purchase of U.S. agricultural commodities can obtain, for a fee, guarantees from the CCC. If a foreign borrower defaults on the loan, the U.S. financial institution files a claim with the CCC for reimbursement, and the CCC assumes the debt. If a country subsequently falls in arrears to the CCC, its debts may ultimately be subject to rescheduling.

Historically, the biggest recipients of export credit guarantees have been Mexico, South Korea, Iraq, Algeria, and the former Soviet Union (FSU). Iraq, for foreign policy reasons, no longer participates in the program. Republics of the FSU, because they are less important as commercial markets for U.S. agricultural exports, are no longer major beneficiaries. Guarantees have helped facilitate sales of a broad range of commodities, but have mainly benefitted exports of wheat, wheat flour, oilseeds, feed grains, and cotton.

The CCC can also extend credit under GSM-102 for two other programs: “supplier credit guarantees” and “facilities financing guarantees.” Under the former, the CCC will guarantee payment by foreign buyers of U.S. commodities and products which are sold by U.S. suppliers on a deferred payment basis. Under this variation of short-term credit guarantee, the foreign buyer alone will bear ultimate responsibility for repayment of the credit. The duration of the credit is short, generally up to 180 days. These credits are expected to be particularly useful in facilitating sales of high-value products, the fastest growing components of U.S. agricultural exports.

The “facilities financing guarantee” is also carried out under the GSM-102 program. In this activity, the CCC will provide guarantees to improve commodity handling facilities and/or U.S. goods and services to address infrastructure barriers to increasing sales of U.S. agricultural products. Eligible projects must improve the handling, marketing, storage, or distribution of imported agricultural commodities and products.

The major issue concerning export credit programs is to what extent and how they might be treated in WTO agriculture negotiations. This issue is discussed below.

Foreign Food Aid

USDA provides food aid abroad through three channels: the P.L. 480 program, also known as Food for Peace; Section 416(b) of the Agricultural Act of 1949; and the Food for

Progress Program. All these programs are authorized in the 2002 FSRIA, except Section 416(b) which is permanently authorized in the Agricultural Act of 1949. The FSRIA also authorizes the Bill Emerson Humanitarian Trust, which is primarily a commodity reserve, that can be used, under certain circumstances, to provide P.L. 480 food aid. The 2007 farm bill also establishes a new food aid program, the McGovern-Dole International School Feeding and Child Nutrition Program.

P.L. 480 Food for Peace. P.L. 480, the Agricultural Trade Development and Assistance Act of 1954, has three food aid titles. Each title has different objectives and provides agricultural assistance to countries at different levels of economic development. Title I, Trade and Development Assistance, provides for concessional sales of agricultural commodities to developing countries for dollars on credit terms or for local currencies. Title II, Emergency and Private Assistance Programs, provides for the donation of U.S. agricultural commodities to meet emergency and non-emergency food needs. Title III, Food for Development, provides government-to-government grants to support long-term growth in the least developed countries. Title I of P.L. 480 is administered by USDA; Titles II and III are administered by the Agency for International Development (AID).

Section 416(b). This program, authorized in permanent law and administered by USDA, provides for the donation overseas of surplus agricultural commodities owned by the CCC. This component of food aid is the most variable because it is entirely dependent on the availability of commodities in CCC inventories. Section 416(b) donations may not reduce the amounts of commodities that traditionally are donated to domestic feeding programs or agencies, prevent the fulfillment of any agreement entered into under a payment-in-kind program, or disrupt normal commercial sales.

Food for Progress (FFP). FFP, authorized by the Food for Progress Act of 1985 and also administered by USDA, provides commodities to support countries that have made commitments to expand free enterprise in their agricultural economies. Commodities may be provided under the authority of P.L. 480 or Section 416(b). Under certain conditions, the CCC may also purchase commodities for use in FFP programs if the commodities are currently not held in CCC stocks.

The 2002 FSRIA extends authority for all P.L. 480 programs and Food for Progress through FY2007. (Section 416(b) commodity donations are permanently authorized in the Agricultural Marketing Act of 1949.) Both market development and humanitarian aspects of P.L. 480 food aid are dealt with in the legislation. Private entities in addition to developing countries are eligible to enter into Title I sales agreements. A 5-year grace period may be granted before a recipient must begin repaying the principal on the credit extended under a Title I agreement. The Secretary could still allow up to 30 years for repayment, but could require repayment in fewer than 10 years if the recipient has the ability to repay in a shorter time. Priority for Title I agreements is accorded to developing countries with demonstrated potential to become commercial markets for U.S. agricultural commodities.

The legislation allows private voluntary organizations (PVOs) and cooperatives to carry out Title II nonemergency programs in countries where AID does not maintain a mission. Also authorized is funding to pay project or administrative and other costs of PVOs and coops at 5% to 10% of annual Title II funding. Intergovernmental organizations, such as the World Food Program, also are eligible to apply for such funds. A minimum of 15% of

nonemergency Title II commodities can be monetized (i.e., sold for local currencies). Monetization enables PVOs and coops to defray the costs of distributing food or implementing development projects in countries where they operate. Local currencies from Title II commodity sales (monetization) can be used in a country different from the one in which the commodities were sold, if the country is in the same geographic region. FSRIA stipulates that the annual minimum tonnage level provided as Title II commodity donations shall be 2.5 million metric tons, of which 1.875 mmt is to be channeled through such eligible organizations as private voluntary organizations, cooperatives, and the World Food Program.

The Bill Emerson Humanitarian Trust. The FSRIA reauthorizes the Emerson Trust enacted in the 1998 Africa Seeds of Hope Act (P.L. 105-385). The trust is primarily a reserve of 4 million metric tons of wheat, corn, sorghum and rice that can be used to help fulfill P.L. 480 food aid commitments to developing countries under two conditions: (1) to meet unanticipated emergency needs in developing countries, or (2) when U.S. domestic supplies are short. The trust, as presently constituted, replaced the Food Security Commodity Reserve established in the 1996 farm bill and its predecessor, the Food Security Wheat Reserve of 1980. The trust, which the Administration recently tapped to meet urgent food aid needs in southern African countries, was used six times between 1980 and 1996—three times for urgent humanitarian relief and three times when domestic supplies were limited. Two and one-half million metric tons of wheat remained in the trust as of June 2002.

McGovern-Dole International Food for Education and Child Nutrition Program. The FSRIA authorizes this new food aid program, which can use commodities and financial and technical assistance to carry out preschool and school food for education programs and maternal, infant and child nutrition programs in foreign countries. Private voluntary organizations, cooperatives, and the World Food Program and foreign governments are all eligible organizations for carrying out these activities. FSRIA mandates CCC funding of \$100 million for the program in FY2003 and authorizes such sums as necessary from FY2004-2007. McGovern-Dole replaces the pilot Global Food for Education Initiative discussed below. (For more information, see CRS Report RS20520, *Foreign Food Aid Programs: Background and Selected Issues*; CRS Report RS20997, *Farm Bill Trade and Food Aid Provisions*; and *The Bill Emerson Humanitarian Trust: Background and Current issues*, CRS Report RS21234.)

Recent Program Activity

Export Subsidies. Although under some pressure from interested commodity groups to use EEP more extensively, USDA has limited the scope and funding of EEP since 1995. The rationale for not using EEP is based on USDA economists' argument that using it in the current international economic environment might further depress prices for wheat and other commodities. Some analysts say that not using EEP strengthens the U.S. hand in on-going WTO agriculture negotiations where a U.S. aim is the elimination of agricultural export subsidies.

In FY1995, the last year of significant program activity, EEP bonuses were valued at \$339 million. In FY1996, \$5 million in EEP bonuses were awarded and none were awarded in FY1997. In FY1998, EEP bonuses amounted to just \$2 million. Expenditures for EEP sales in FY1999 totaled \$1 million. EEP bonuses of \$2 million (for frozen poultry) were

awarded in FY2000. For FY2001, \$7 million of EEP bonuses were awarded. The President's FY2002 budget proposed EEP spending of \$478 million, but were awarded.

Recent levels of DEIP reflect limits imposed by Uruguay Round Agreement commitments, an end to the "roll-over" authority in the Agricultural Agreement, which allowed countries to draw on unused subsidy authority from previous years, and improved world market conditions for skim milk powder.

The program level for DEIP in FY2000 was \$78 million and in FY2001 is estimated to have been \$8 million. In FY2002, DEIP bonuses were an estimated \$43.3 million. The committee report for S. 1191, the Senate version of FY2002 agriculture appropriations, indicated that the Administration should use fully its DEIP authority.

Market Development. MAP, like EEP, is not funded by annual appropriations, but appropriations bills have on occasion capped the amounts that could be spent on the program. For example, the FY1999 agricultural appropriations legislation imposed no limits on MAP funding, but did prohibit MAP spending in support of promotion of exports of mink pelts or garments, a provision that was first adopted in the FY1996 agriculture appropriations bill. Since 1993, no MAP funds may be used to promote tobacco exports. Some Members of Congress targeted MAP for cuts in FY2000 to help offset increased expenditures on other programs, but such amendments were defeated. MAP was unsuccessfully targeted by budget cutters in FY2001 as well. USDA's allocation of \$100 million for MAP funding in FY2002 is the full amount authorized in the 1996 farm bill plus \$10 million authorized by the 2002 farm bill. A proposed amendment to eliminate completely MAP funding in FY2002 was defeated during floor consideration of H.R. 2330, the House-passed version of FY2002 agriculture appropriations.

Prior to FY2000, FMDP was funded as part of the appropriation of the Foreign Agricultural Service. The 1996 farm bill provided new, statutory authority for the Program and authorized it through 2002. In FY2000, USDA moved funding for FMDP from discretionary to CCC funding, thus shifting its funding into the mandatory category. Funds allocated for FMDP in FY2001 were \$28 million and USDA has allocated \$33.5 million for the program in FY2002.

Export Credit Guarantees. For FY2001 export credit guarantees financed an estimated \$3.2 billion of U.S. agricultural exports. FY2002 guarantees are estimated to rise to \$3.4 billion.

Food Aid. P.L. 480 food aid averaged around \$1.2 billion from 1995 to 1998. In FY1999, however, nearly \$1.8 billion in P.L. 480 food aid was provided. Although only around \$1.1 billion was appropriated for P.L. 480 in FY1999, the final total includes approximately \$700 million of food aid programming for Russia, which was financed by a transfer of funds from the Commodity Credit Corporation. The FY2000 program level for P.L. 480 was \$1.076 billion, while FY2001 P.L. 480 spending \$1.086 billion. The FY2002 spending level for P.L. 480 is estimated at \$1.046 billion.

Section 416(b) was used to donate CCC purchases of around 5.3 million metric tons of wheat and wheat flour in the President's Food Aid Initiative in FY1999. Approximately 30 countries designated as having food problems received Section 416 commodities. The

FY2000 CCC purchase of 3 million metric tons of wheat were also donated under Section 416(b). Allocations of Section 416(b) commodity donations in FY2001 were an estimated 2.6 million metric tons and in FY2002 were estimated to be 1.6 million metric tons.

Global Food for Education Initiative. Section 416(b) commodities were used to launch a global food for education initiative (GFEI) in July 2000. Under the GFEI, USDA donates agricultural commodities for use in school feeding and pre-school nutrition projects in developing countries. The program's rationale is that school feeding helps assure that children attend and remain in school, improves childhood development and achievement, and contributes more broadly to social and economic development. USDA's Commodity Credit Corporation (CCC) has committed \$300 million of U.S. commodities and transportation to the initiative under the authority of Section 416(b). USDA-approved projects are being implemented by the UN World Food Program (WFP), private voluntary organizations, and eligible foreign governments.

Emerson Trust. Administration proposals to reduce food aid's reliance on surplus commodities and anticipated demand for emergency food aid, especially in southern Africa, have focused renewed attention on the Emerson Trust, which had not been used since 1996. The Secretary of Agriculture announced releases from the Trust of 275,000 tons of wheat on June 10, 2002 and 300,000 tons of wheat on August 28, 2002. The wheat from the reserve has been exchanged for an equal value of corn, beans and vegetable oil for use in humanitarian relief in southern Africa. There, an estimated 14.4 million people will need emergency food aid to compensate for severe food shortages and stave off famine through much of 2003. Private voluntary organizations and cooperatives that implement food aid programs in developing countries, while welcoming use of the trust to alleviate hunger in Africa, have expressed concerns that the trust be reimbursed in a way that does not use P.L. 480 funds as required in current law.

FY2003 Budget Proposals and Appropriations

The House Appropriations Committee reported bill recommends budget authority of \$1.491 billion in FY2003 for USDA's international activities that are subject to annual appropriations (P.L. 480 food aid, salaries and expenses of the Foreign Agricultural Service, and administrative expenses for managing export credit guarantee programs). The House Committee level is \$367 million greater than enacted in FY2002 and \$41.5 million greater than requested by the President for FY2003. The Senate Appropriations Committee bill (S. 2801) recommends budget authority of \$1.464 billion, \$27 million less than the House Committee bill. S. 2801 is around \$15 million greater than the President's request. Almost all of the additional funding in both bills goes to food aid programs. Increased budget authority requested for FY2003 reflects a decision by the Administration to phase out food aid that is dependent on surpluses and to pay for much of U.S. foreign food aid with discretionary rather than mandatory spending. Although both bills recommend increases in budget authority for discretionary food aid programs, the Committee reports also stress the continuing importance of commodity assistance and the use of surplus commodities in U.S. food aid programs. The Senate Committee report (S.Rept. 107-223), for example, expresses strong disagreement with Administration decisions to phase out food aid based on commodity surpluses.

For one CCC-funded direct export subsidy program, the Export Enhancement Program (EEP), H.R. 5263 limits spending to \$28 million.. In contrast, the Administration had proposed \$478 million for EEP, the maximum permitted by the 1996 farm law and world trade obligations. For its proposed reductions from the authorized level, the House bill scored savings of \$450 million. Savings from EEP reductions were reallocated to a variety of other USDA programs (although only about \$1 million annually has been used in recent years). In the past, the Congressional Budget Office has scored no savings for proposed cuts to EEP funding, since actual spending in the program has been negligible. However, this year, the House Budget Committee used the Office of Management and Budget (OMB) score which allows dollar- for-dollar savings for cuts from the authorized EEP level.

House Committee actions imply a program level of around \$6.0 billion for all of USDA's international activities—food aid, export credit guarantees, export market development, and export subsidies.¹ The Administration's budget estimate of a program level of \$6.45 billion for FY2003 was based on estimated spending for EEP of \$478 million. The program levels for USDA's international activities were an estimated \$6.5 billion in FY2002, and were \$5.8 billion in FY2001.

FAS Salaries and Expenses. For salaries and expenses of FAS, the House Committee bill recommends budget authority of almost \$130 million and the Senate Committee bill \$131.9 million, compared with the President's request of \$131.6 million and the FY2002 enacted amount of \$121.8 million. In addition, both Committees recommend around \$4.1 million for administrative expenses of FAS and FSA in connection with the export credit programs.

Foreign Food Aid: Funding and Issues. Within the \$1.491 billion of recommended budget authority requested for discretionary programs, the House Committee bill provides \$1.357 billion for P.L. 480 (Food for Peace) programs, which have been the main channel for U.S. foreign food aid and are the largest appropriated international USDA program. The recommended amount is \$358 million greater than the FY2002 enacted amount and \$43 million greater than the President's FY2003 request. Compared to the budget request, the Committee bill increases Title II commodity donations by \$15 million and Title I loans by \$28 million. Within the \$1.464 billion of budget authority recommended by the Senate Committee for discretionary programs, \$1.328 billion would go to P.L. 480 food aid, \$29 million less than recommended by the House. One difference is that the House Committee provided more BA for Title II food aid than requested by the President, while the Senate Committee recommended the amount requested by the President. The budget request, as submitted, is estimated by USDA to support 3.7 million metric tons of P.L. 480 commodity assistance to developing countries in FY2003, about the same volume as provided in FY2002 under P.L. 480.

¹ Program level is an estimate of the value of all goods and services provided through USDA's international activities. Program level exceeds budget authority because certain significant federal credit programs, such as export credit guarantees funded through the borrowing authority of the Commodity Credit Corporation (CCC), do not require annual appropriations. Only administrative expenses and loan subsidies, not the value of the loan or guarantee, require an appropriation. In addition, CCC funded activities, such as EEP, MAP, and FMDP, which are included in program level, do not require annual appropriations.

Despite the recommended increases in budget authority, the program level for all U.S. food aid would decline to \$1.2 billion, compared with an estimated \$1.61 billion in FY2002 and \$1.66 billion in FY2001. The reduction in program level is primarily due to the Administration's decision to curtail sharply reliance on another food aid vehicle, Section 416(b) surplus commodity donations. Section 416 is funded through the borrowing authority of the Commodity Credit Corporation, and is therefore not subject to annual appropriations. The Administration expects to use only about \$50 million in Section 416 commodities (mostly surplus nonfat dry milk) in FY2003, compared with an estimated \$400 million in Section 416 commodities in FY2002 and \$63 million in FY2001.

The volume of food aid that would be available in FY2003 will also be affected by price increases for most commodities used in the program. USAID, for example, estimates that because of price increases the volume of commodities it could make available in FY2003 under P.L. 480 Title II, even with increased appropriations, would be the same as for FY2002, i.e., 2.2 million metric tons. The prospect of less food aid available in FY2003 complicates the U.S. response to the food crises in southern Africa and elsewhere on that continent.

Proposed reductions in Section 416 (which in past years have not necessarily been achieved) are rationalized by a recent Administration review of food aid that also recommended (and is in the budget) that all programs now run through private voluntary organizations (PVOs), cooperatives, and the World Food Program be placed in USAID, with USDA food aid activities confined to government-to-government programs. Consistent with this approach, the Administration shows no CCC funding in FY2003 for Food for Progress (FFP), which provides U.S. commodities to developing countries and emerging democracies. CCC funding of this program has averaged around \$100 million annually in recent years. Any FFP activity would be limited to government-to-government programs under P.L. 480 Title I. Reauthorization of the FFP program in the 2002 farm bill (P.L. 107-701), with continued reliance on CCC funding, complicates the efforts of the Administration to phase out CCC-funded food aid programs.

The use of commodity surpluses to augment U.S. food aid has been criticized by the European Union, Australia, and other agricultural exporting countries as an effort to circumvent U.S. World Trade Organization (WTO) export subsidy reduction commitments. These trading partners argue that much of U.S. food aid is being used to manage supplies rather than to meet emergency needs and that large food aid shipments impede sales of agricultural products by and between developing countries. The issue of food aid and international agricultural trading rules is being pursued by U.S. trading partners in the new round of multilateral trade negotiations launched at the end of 2001.

No additional funding is in the FY2003 budget request for the Global Food for Education Initiative (GFEI), a pilot school and child nutrition program begun by the Clinton Administration and expected to cost an estimated \$230 million. USDA said a decision on continuation will hinge on the results of an evaluation. However, the new farm bill (P.L. 107-171) mandates \$100 million of CCC funding to continue this program in FY2003 and "such sums as necessary" in fiscal years 2004-2007. Finally, the Administration proposes that all costs of the "cargo preference" law, which requires that 75% of all food aid be shipped on U.S. flag vessels when feasible, would be borne by USDA; currently, the U.S. Maritime Administration reimburses USDA for one-third of those costs.

Export Programs. In addition to Section 416(b) and Food for Progress, many other USDA international programs are not subject to direct annual appropriations, and instead are funded through CCC borrowing authority. About two-thirds of the proposed FY2003 program level, \$4.058 billion, would be for CCC export credit programs, which guarantee payment for commercial financing of U.S. agricultural exports. The export value of credit guarantees historically has not reached the levels anticipated in budget requests due to actual market conditions and credit needs.

U.S. export credit programs have also been raised as an issue in WTO agricultural trade negotiations. The EU and other trading partners charge that the program has a subsidy element (although it is much less than the subsidy represented by the EU's export restitution program) and gives the U.S. an unfair competitive advantage in exporting certain agricultural commodities. The U.S. has been engaged in negotiations on export credit programs in the Organization for Economic Cooperation and Development (OECD), but these negotiations did not succeed and have been suspended. Any changes in the U.S. program that might result from trade negotiations would have to withstand scrutiny by House and Senate Agriculture Committees which strongly support the programs as they are presently constituted.

Trade Negotiations

Export subsidies are on the agenda of WTO agricultural trade negotiations now underway. The United States has proposed that such subsidies be eliminated, while the European Union, which opposes complete elimination of such subsidies, has conditioned its willingness to negotiate reductions in export subsidies on the inclusion of export credits and food aid on the WTO agriculture negotiating agenda.

Not only the EU, but other U.S. trading partners such as Australia, Brazil, and a number of agricultural exporting developing countries also have raised the issue of large U.S. food aid shipments and export credit guarantee programs in on-going WTO agriculture negotiations. They have suggested that the United States is using food aid to get around its export subsidy reduction commitments made in the 1994 Uruguay Round Agriculture Agreement and that export credit programs should also be curbed along with direct export subsidies. The United States has countered that its food aid shipments, though large, are made in conformity with WTO rules, and are being made available to countries with food needs or in the context of development programs such as the GFEI. Food aid is also an issue for some food-importing developing countries who feel that the United States and other developed countries have not adequately addressed their commitment made in the Uruguay Round negotiations to meet long-term needs for food aid, for financing food imports, and for technical assistance to improve food production. On export credits, the United States, while professing willingness to make changes in programs that would reduce the subsidy component of such programs, has maintained that export credit programs also meet food security needs of some importing countries.

Along with market promotion and food aid programs, export credit guarantees are exempt from Uruguay Round disciplines and reduction commitments. Member countries of the World Trade Organization (WTO) agreed, however, in the 1994 Uruguay Round Agreement on Agriculture, "to work toward the development of internationally agreed disciplines to govern the provisions of export credits, export credit guarantees or insurance

programs and, after agreement on such disciplines, to provide export credits, export credit guarantees, or insurance programs only in conformity therewith.” Negotiations on agricultural export credits and guarantees were carried out in the Paris-based Organization for Economic Cooperation and Development (OECD).

In the OECD negotiations, some countries suggested that the United States change its program by, for example, reducing the volume of credit guaranteed or shortening the terms for which guarantees are provided. The United States indicated a willingness to make some changes in the program in exchange for greater transparency on the part of other countries’ export credit financing agencies and state trading enterprises.

The OECD negotiations on new rules and disciplines for agricultural export credits and guarantees ended without agreement. The main differences were over how an agreement would cover state agricultural exporting enterprises like those used by Australia and Canada and the length of repayment terms for U.S. export credit guarantees. Without an agreement, negotiations on agricultural export credits have now moved into the on-going WTO agriculture trade negotiations, where a number of WTO members have already raised the issue.

Many in the U.S. agricultural community have expressed concerns that what they regard as an effective tool for expanding agricultural exports not be adversely affected by trade negotiations. The Trade Act of 2002, which contains negotiating objectives for U.S. participation in the current round of multilateral trade negotiations in the WTO (P.L. 107-210), makes preservation of export credit programs (and food aid) a principal negotiating objective. This objective calls for eliminating agricultural export subsidies, but maintaining bona fide food assistance programs, and preserving U.S. market development and export credit programs. Nevertheless, in WTO agriculture negotiations, U.S. officials have indicated a willingness to discuss disciplines on export credit programs. (For more information, see *Agricultural Export Subsidies, Export Credits, and the World Trade Organization*, CRS Report RS20858.)
