Head Start Issues in the 108th Congress

Summary

Head Start is a federal program that has provided comprehensive early childhood development services to low-income children since 1965. Services provided to preschool-aged children include child development, educational, health, nutritional, social and other activities, intended to prepare low-income children for entering kindergarten. The program is administered by the Administration for Children and Families of the Department of Health and Human Services (HHS).

Unlike many other social service programs, federal Head Start funds are provided directly to local grantees, rather than through states. Programs are locally designed, and are administered by a network of over 1,500 public and private nonprofit agencies. In FY2002, Head Start funded enrollment for 912,345 children.

Head Start was last reauthorized in 1998 (P.L. 105-285) for fiscal years 1999-2003, and is due to be reauthorized this year. Alongside his FY2004 budget request (which asked for \$6.8 billion for Head Start), President Bush has proposed to give states the option to administer the program, provided they supply a plan that sufficiently explains how Head Start will be coordinated with other preschool programs to foster comprehensive, high quality preschool programs. The budget also conveys the Administration's plan to transfer federal responsibility for the Head Start program from HHS to the Department of Education. The reauthorization bill passed by the House (H.R. 2210) does not include the transfer proposal (but does include an eight-state demonstration program).

The Head Start program has received increases of varying levels over the past two decades (see **Table 1**). P.L. 108-7 provides \$6.668 billion for Head Start, of which \$1.4 billion becomes available in FY2004. This total reflects a \$130 million increase from the FY2002 appropriation of \$6.538 billion.

Program performance and the long-term impact on children, particularly with respect to educational attainment, continue to be areas of focus and concern. The 1998 revisions to the Head Start Act increased the amount of new appropriations that must be used for quality improvement activities, at least through FY2003. In part, the law requires HHS to develop specific education performance standards, and establishes teacher and staff training related to these standards as a priority use of quality improvement funds. In addition, the 1998 amendments to Head Start mandate and reserve funds for additional studies on the program's impact.

Development of a national reporting system that can be used to assess the effectiveness of Head Start programs in achieving successful outcomes for children in terms of school readiness — particularly the areas of literacy and number knowledge — is currently underway. This national reporting system is scheduled to be implemented this fall, and will reportedly assess Head Start 4- and 5-year olds twice a year on educational performance measures — using indicators that were included in legislation as part of the 1998 reauthorization of Head Start. Teachers are also being trained in a Strategic Teacher Education Program (STEP), to use research-based strategies to implement early and emergent literacy.

Head Start Issues in the 108th Congress

Overview

Head Start is a federal program that has provided comprehensive early childhood development services to low-income children since 1965. The program is administered by the Administration for Children and Families of the Department of Health and Human Services (HHS). Head Start, last reauthorized in 1998 (P.L. 105-285) for fiscal years 1999-2003, is up for reauthorization this year. Alongside his FY2004 budget request (which asked for \$6.8 billion for Head Start), President Bush proposed to give states the option to administer the program, provided they supply HHS *and* the Department of Education with a plan that sufficiently explains how Head Start would be coordinated with other preschool programs to foster comprehensive, high quality preschool programs. The budget also conveys the Administration's desire to transfer federal responsibility for the Head Start program from HHS to the Department of Education. (For more details see *President's FY2004 Budget Request* and *President's Head Start Proposal*, later in this report.)

The Head Start reauthorization bill introduced in the House (H.R. 2210) on May 22, 2003, featured the state option provision (as Title II of the bill, entitled "State Demonstration Program"), but did not propose to move the Head Start program from HHS to the Department of Education. On June 12, 2003, the Subcommittee on Education Reform forwarded an amended version of H.R. 2210 to the full Committee on Education and the Workforce, restricting the state demonstration program to a maximum of eight states. The full committee further amended H.R. 2210 on June 19, 2003, but the eight-state demonstration program was retained from subcommittee's bill. The House passed H.R. 2210 by a one vote margin (217-216) on July 25, 2003. (For more information see *Reauthorization Bills in 2003*, later in this report.)

The Head Start program has received increases of varying levels over the past two decades (see **Table 1**). The most recent appropriations measure signed into law (P.L. 108-7, February 20, 2003) is the Consolidated Appropriations Resolution, 2003 (H.J.Res. 2), which provides the Head Start program with \$6.668 billion (of which \$1.4 billion becomes available in FY2004). The program was funded at \$6.538 billion for FY2002, up from \$6.2 billion in FY2001, and \$5.267 billion in FY2000.

Head Start Program

Services. Head Start provides comprehensive early childhood development, educational, health, nutritional, social and other services to low-income preschool children and their families. These services are intended to prepare children to enter

kindergarten and to improve the conditions necessary for their success in later school and life. Head Start strongly emphasizes the involvement of families and the local community to assure that programs are responsive to the unique needs of each community. Since flexibility in local program design and operation is encouraged, there is wide variation across the country in how Head Start services are delivered (e.g., center-based, home-based, or some combination), as well as in local program costs, sponsoring agencies, and coordination arrangements with other social service programs. Head Start operates both full- and part-day programs — most only during the school year. Some local Head Start programs do coordinate with other programs to lengthen the time of care, both in terms of hours, and the year. Full-day enrollment in Head Start is defined as 6 or more hours per day. Part-day sessions must comply with a minimum class time requirement of 3.5 hours.

Funding. Federal appropriations for Head Start substantially increased during the 1990s, tripling from the FY1990 level of \$1.552 billion to the FY1999 level of \$4.658 billion, and quadrupling from FY1990 to the FY2003 level of \$6.668 billion. These increased appropriations have been used both to expand the number of children served and for quality improvement activities.

Table 1. Head Start Funding: FY1990-FY2003
(\$ in billions)

Source: Table prepared by the Congressional Research Service (CRS) based on data from the Head Start Bureau.

ssan=such sums as necessary.

^a This amount includes an advance appropriation of \$1.4 billion for the following fiscal year.

Unlike some other federal social service programs that are funded through the states, HHS awards Head Start funds directly to local public and private nonprofit and for-profit grantees. Grantees must contribute a 20% nonfederal match, which may be in cash or in-kind, unless they are granted a waiver. No more than 15% of a grantee's total program costs may be for administration. Funds are awarded to about 1,500 grantees at the discretion of HHS from state allocations determined by a formula in law. However, before these state allocations are made, the law contains a series of set-aside provisions that reserve funds for specified activities.

Under the 1998 Head Start amendments (P.L. 105-285), up to \$35 million of total Head Start appropriations is reserved annually for transition-to-school grants; up to \$5 million is reserved annually for national research on the impact of Head Start; and \$12 million in FY1999 and such sums as necessary thereafter is reserved for other research, demonstration and evaluation activities, including longitudinal studies.

Also of total Head Start appropriations, the Secretary must reserve 13% for use in the following priority order:

- ! Indian and migrant Head Start programs, and services for children with disabilities;
- ! payments to outlying territories, not to exceed one-half of 1% of the total annual appropriation. The territories include Guam, American Samoa, the Northern Mariana Islands, the Virgin Islands, Micronesia, the Marshall Islands, and Palau;
- ! training and technical assistance (not less than 2% of the total annual appropriation, of which at least \$3 million must be related to family literacy);
- ! discretionary payments made by the Secretary, including the costs (other than federal salaries) of local program monitoring and correcting deficiencies and conducting proceedings to terminate Head Start grantees; and
- ! payments for research, demonstration and evaluation activities.

Of remaining Head Start appropriations (after reserving the amounts described above and adjusting the prior year appropriation to reflect the percentage change in the Consumer Price Index), “regular” Head Start funds are allotted among states according to the following formula, which was established in the 1998 amendments:

- ! each state first receives an amount equal to the amount received by grantees in that state for FY1998, and any amounts available above the FY1998 level are distributed proportionately among states on the basis of the number of children under 5 years old whose family income is below the federal poverty line.

Although the amounts allocated according to the above formula are actually distributed directly to local grantees, the Secretary may use a portion of these funds to make grants to the states, to foster collaboration within the state among Head Start and other activities designed to benefit low-income children and families. These state collaboration grants typically range between \$125,000 and \$225,000 per state. (See **Table 3** at the end of this report for estimated state allocations for Head Start for FY2003.)

President’s FY2004 Budget Request. The Administration’s budget for FY2004 (released February 3, 2003) requests \$6.816 billion for Head Start (of which \$1.4 billion would be advance appropriated for FY2005). The Administration states that in FY2004 almost 923,000 children will receive Head Start services, including 62,000 in Early Head Start. Budget documents also state that the increased funding, coupled with the President’s proposed changes allowing states to administer Head

Start in coordination with other preschool programs, will enable the program to maintain current service levels and increase enrollment by up to 10,500 children.

In addition, the President proposes to change current law's set-aside for training and technical assistance (T/TA) from *at least 2%* of the total Head Start appropriation to *up to 2%*. According to the Administration, this change would provide the Secretary with the discretionary authority to allocate Head Start funds each year in order to maximize benefits to children and families. The budget also explains that "in order to improve coordination between Head Start and other Federal, State, and local programs affecting pre-school children, the President plans to move responsibility for managing the Head Start program from the Department of Health and Human Services to the Department of Education."¹ It proposes that this transition begin in 2004, with the Department of Education assuming full responsibility for the program in 2005.

FY2004 Labor/HHS/Education Appropriations – in progress.

Congress has not yet passed a final FY2004 appropriations bill for the Departments of Labor, HHS, and Education. On July 10, 2003 the House amended and passed its Labor/HHS/Educ appropriations measure (H.R. 2660; H.Rept.108-188), which would provide \$6.816 billion for Head Start, the same amount requested by the President for FY2004, and \$148 million above the FY2003 appropriation. Likewise, the Senate Committee on Appropriations has also recommended funding Head Start at a level of \$6.816 billion, reporting S. 1356 (S.Rept.108-81) on June 26, 2003.

FY2003 Labor/HHS/Education Appropriations. Fiscal year 2003 funding for the Departments of Labor, HHS, and Education is provided in the Consolidated Appropriations Resolution, 2003 (P.L. 108-7), signed into law on February 20, 2003. The law includes \$6.668 billion for Head Start (of which \$1.4 billion is advance appropriated, to become available in FY2004). Unlike many other discretionary programs funded under the law, Head Start is not subject to the across-the-board rescission included in the law.²

Prior to the signing of P.L. 108-7, Congress passed a series of continuing resolutions (CRs) extending funding for programs, including Head Start, into FY2003. Prior to the CRs, the Senate Appropriations Committee approved its version of a Labor/HHS/Ed bill (S. 2766/S.Rept. 107-216). The Committee's proposed funding level for Head Start was \$6.870 billion for FY2003. The House introduced a version of its FY2003 appropriations bill (H.R. 5320) for Labor/HHS/ED. There was no committee action, and the bill requested the same funding level for Head Start as that proposed by the President in his FY2003 budget.

President's FY2003 Budget Request. The Administration's FY2003 budget included a \$130 million increase for Head Start, which would have brought it to \$6.667 billion. Of that total, \$1.4 billion would be advance appropriated for

¹ See *Fiscal Year 2004 Budget of the U.S. Government: Analytical Perspectives*, p. 251.

² H.J.Res. 2, as amended and passed by the Senate, (and ultimately passed into law) included S.Amdt. 188 (offered by Senator Dodd), which exempts the Head Start funding from rescission.

FY2004. Similar to the FY2002 budget document, the FY2003 budget called for making school readiness — pre-reading and numeracy skills — Head Start's top priority. Moreover, the Administration expressed support for a plan to move Head Start to the Department of Education as part of the program's reauthorization in 2003, and highlighted that HHS and ED had formed a task force to assess ways to improve Head Start and facilitate the transfer between agencies. The budget also maintained support (\$75 million) for ED's Early Reading First program, to help prepare young children to read in existing preschool and Head Start programs.

FY2002 Funding. On January 10, 2002, H.R. 3061, the bill making FY2002 appropriations for the Departments of Labor, HHS, and Education, was signed into law (P.L. 107-116). It included \$6.538 billion for Head Start, of which \$5.138 was available in FY2002, and \$1.4 billion in FY2003. The FY2002 total Head Start appropriation exceeded the FY2001 level (\$6.2 billion) by \$338 million. It also was greater than the amount requested by the President in his FY2002 budget (\$6.32 billion). The Administration had asserted that its proposed increase would be used to maintain current services and enrollment levels. Despite the Administration's intent to reverse the practice (which began in FY2000) of advance appropriating funds for Head Start, the FY2002 appropriations bill reserved \$1.4 billion of the \$6.538 billion appropriated to become available in FY2003. The advance funding component has been used as a budgetary mechanism to spread out the obligation of funds for the program, without having programmatic impacts.

FY2001 Funding. The FY2001 Consolidated Appropriations Act (P.L. 106-554) appropriated \$6.2 billion for the Head Start program. Of this amount, \$4.8 billion was available for FY2001, and \$1.4 billion became available in FY2002.

Eligibility. As authorized by law, HHS regulations require that at least 90% of children enrolled by each Head Start grantee must come from families with income at or below the official federal poverty guideline (\$18,400 for a family of four in 2003) or from families receiving welfare assistance. Up to 10% of the children may be from families whose incomes exceed the poverty guideline. Regulations also require grantees to reserve at least 10% of their slots for children with disabilities. Head Start is authorized to serve children at any age prior to compulsory school attendance; however, most children are 3- and 4-year-olds. However, the 1994 reauthorization did create the Early Head Start program, which serves children under age 3. In FY2002, children under age 3 represented only 7% of total enrollment.

Under the 1998 amendments, a child who has been determined to be low-income and who is participating in Head Start may continue to be considered low-income for another program year. The 1998 amendments also provide grantees with additional flexibility in determining family income and therefore, eligibility for participation. Specifically, the amendments authorize grantees to consider family income during the 12 months before the month in which an application is submitted, or during the calendar year before the calendar year in which an application is submitted.

Participation. Data from HHS show funded enrollment for Head Start in FY2002 to have totaled 912,345 children (of whom about 63,000 were under age 3).³ This is an increase from the FY2001 level of 905,235, and the 857,664 total from FY2000. It should be noted that “funded enrollment” refers to the number of Head Start “slots” that are funded, not the total number of children served throughout the year (accounting for turnover), which is higher. As stated in the FY2004 budget request, the Administration foresees almost 923,000 children receiving Head Start services in 2004 (of which approximately the same percentage will be in Early Head Start as in FY2002).

³ Additional program data can be found on the HHS Head Start Bureau’s website [<http://www.acf.dhhs.gov/programs/hsb/research/2003.htm>]

Table 2. Estimates of Head Start Populations and Percent Served, FY2001

(number in thousands)

Age	Population March 2002	Economically eligible 2001	FY2001 Enrollment	Percent served
Under 3	11,738	2,406	63	3%
Age 3	3,818	740	317	43%
Age 4	3,977	741	489	66%
Age 3-4	7,794	1,481	806	54%
Age 5 and above	7,813	1,441	36	3%

Source: Table prepared by the Congressional Research Service (CRS) using data from the March 2002 Current Population Survey (CPS). Estimates of economic eligibility are based on the percentage of children living in families with annual income below Federal Poverty Income Guidelines or in families receiving Temporary Assistance for Needy Families (TANF), in 2001. Head Start enrollment estimates are based on data and estimates from HHS.

Early Head Start. Early Head Start (EHS) was established in the 1994 reauthorization legislation (P.L. 103-252), to serve infants and toddlers who are generally too young to participate in the regular Head Start program. The law requires that a portion of Head Start's total appropriation be set aside to fund the EHS program. For FY1998, Congress earmarked more than was required by law for EHS, and the statutory set-aside was increased in the 1998 amendments to Head Start. One of the few legislative changes sought by the Clinton Administration, during the 1998 debate on Head Start, was an increase in the EHS program. The current law EHS set-asides are: 7.5% in FY1999, 8% in FY2000, 9% in FY2001, and 10% in each of FY2002 and FY2003.

The first EHS grants were awarded in September 1995, and totaled \$47 million. In FY2000, \$421 million was used to support nearly 600 projects in all 50 states, the District of Columbia and Puerto Rico. These projects served approximately 45,000 low-income families with children under the age of three.

EHS grantees must design programs which respond to the strengths and needs of individual families with services including education, in and out of the home; home visits, especially for families with newborns and infants; parent education, including parent-child activities; comprehensive health services, including services to women during and after pregnancy; and ongoing parental support through case management and peer groups. All programs must conduct an assessment of community resources and needs and must ensure the recruitment and development of high quality staff.

In addition to increasing EHS appropriations, the 1998 amendments also require that an EHS research and evaluation plan be developed to identify successful program models and variables contributing to program outcomes and to lay groundwork for future longitudinal studies.

President's Head Start Proposals and Initiatives. On February 3, 2003, alongside release of the President's FY2004 Budget, the Administration issued a press release announcing the President's proposal to make changes to the Head Start program.⁴ This was followed by a White House document outlining the Administration's assessment of the current status of the Head Start program, and its plans for the program in the future.⁵ The Administration states that the top goal of the Head Start reauthorization this year should be to improve both Head Start and other preschool programs to ensure that children are prepared to enter kindergarten. The President believes states should have the opportunity to administer the program, provided they demonstrate how Head Start will be coordinated with other preschool programs and services to emphasize developing skills and behaviors including language development; pre-reading skills; numeracy; and social and emotional competence, while meeting state-established accountability standards.

Under the President's proposal, interested states would submit a plan for the approval of both HHS *and* the Department of Education, in which they outline: state preschool goals and activities; a state accountability program; an explanation of how the current level of enrollment of Head Start eligible 3- and 4-year olds will be maintained (if not exceeded); information regarding the most recent year's spending on Head Start and state preschool programs, and assurances that this level will be at a minimum maintained; plans for assuring professional development for staff; and the plans for coordination of programs and funding (state and federal) for the purpose of promoting school readiness. Programs specifically mentioned are: Head Start, Early Head Start, Title I preschool, the special education preschool program (IDEA), state-funded preschool, and the Child Care and Development Block Grant. The press release does not explicitly mention the planned transfer of the program from HHS to the Department of Education, however, as stated above, this proposal is included in the FY2004 Budget.

Aside from proposals that require congressional approval, the Administration has moved ahead with two additional efforts that are in keeping with the Administration's Good Start, Grow Smart: Early Childhood initiative, but that do not require legislative changes to the Head Start Act. One is the Strategic Teacher Education Program, also known as Project STEP, described by the Head Start Bureau as "a comprehensive, multi-faceted, sequential professional development endeavor to ensure teachers use research-based strategies to implement early and emergent literacy." As part of this development, during the summer and fall of 2002, 3,000 Head Start staff and 100 state child care administrators received 32 hours of training in strategies to support children's emerging literacy. Those who were trained are expected to serve as "mentor coaches" for staff within their respective Head Start programs.

⁴ For additional information, the press release from the Department of Health and Human Services (HHS) is available at [<http://www.dhhs.gov/news/press/2003pres/20030203.html>]

⁵ This document, entitled "Head Start Policy Book" on the White House web site, can be read at [<http://www.whitehouse.gov/infocus/earlychildhood/hspolicybook/summary.html>]

The second effort is the development of a national reporting system that can be used to assess the effectiveness of Head Start programs in achieving successful outcomes for children in terms of school readiness — particularly the areas of literacy and number knowledge. This national reporting system is scheduled to be implemented this fall, and will reportedly assess Head Start 4- and 5-year olds twice a year on educational performance measures — using indicators that were included in legislation as part of the 1998 reauthorization of Head Start (P.L. 105- 285, Sec. 108 (b)(5)).

History of the Proposed Transfer of Head Start to the Department of Education. During his 2000 presidential campaign, President Bush proposed moving the Head Start program from HHS to the Department of Education as part of an effort to prioritize the education (school-readiness) component of Head Start over the health, nutrition, and social service components of the program. The President proposed a Reading First reform agenda aimed at making pre-reading and numeracy skills Head Start's top priority. By also supporting an early childhood reading initiative in the Department of Education, along with a reading program focused on children in kindergarten through second grade who are at risk of falling behind, the President's goal is to ensure that young children participating in existing preschool and Head Start programs are able to read by the time they reach third grade.

Many Head Start advocates believe that the Head Start program should remain in HHS. Because Head Start offers a wide variety of services beyond traditional education, there is concern that transferring the program to the Department of Education could restrict Head Start to a narrow, classroom program, without the broad set of human services currently provided. Opponents of the shift further suggest that moving the program from an agency where children receive comprehensive services, to one focused on education, would compromise the parental and community action strengths of Head Start. An aide to the President assures that the proposed move is not intended to interrupt any of the social service components, but to stress the most important part of Head Start, which the President believes is literacy development. The President has described the proposed move as consistent with his priorities, and hopes that moving the program to the Department of Education will increase the chances of making every child a proficient reader by third grade. President Bush is relying on research findings which show that children taught pre-reading and math skills in preschool, enter school ready to learn reading and mathematics. Some of those in favor of keeping Head Start in HHS argue that Head Start currently focuses on getting children ready for school, including readiness in language and early literacy.

There is a history of proposed transfers of the Head Start program. In 1978, President Carter proposed to transfer Head Start to the Department of Education. Edward Zigler, a noted architect of Head Start, was one of the most ardent opponents of the transfer, for the reasons cited above. While the Reagan Administration tried to include Head Start in a block grant, up until now, no president since Carter had recommended a transfer of Head Start to the Department of Education. Based on past history, it is likely that the Bush Administration will face tough opposition if this issue is debated in the 2003 reauthorization. As mentioned earlier, however, the

House reauthorization bill (H.R. 2210) does not include the proposal to transfer Head Start to the Department of Education.

Reauthorization Bills in 2003. The Head Start Act is due to be reauthorized this year, and at this point, the House has passed a reauthorization bill (H.R. 2210), while in the Senate, Head Start legislation has been introduced (S. 1483), but a bill has not yet been taken up at the committee level.

The School Readiness Act of 2003 (H.R. 2210) – passed by the House. This bill to reauthorize the Head Start Act was introduced in the House by Representative Castle on May 2, 2003, with eight Republican co-sponsors. The originally introduced bill was subsequently amended at both the subcommittee and full committee level, and was passed by the House on July 25, 2003.

H.R. 2210, as amended by the full Committee on Education and the Workforce on June 19, 2003, included two titles; the first would amend sections of the current Head Start law, and the second would introduce a new option for eight qualifying states to administer their own federal Head Start funds. (The bill as originally introduced would have provided this option to all qualifying states, but as amended would limit the option to eight qualifying states over the five year period of the legislation.) H.R. 2210 was reported from the full Committee on Education and the Workforce with a vote of 27 (Republicans) to 20 (Democrats), and subsequently was passed by the House by a one-vote margin of 217-216. Prior to passage, Rep. George Miller offered a substitute bill on the floor (H.Amdt. 322), which proposed to retain the changes to Title I as included in H.R. 2210, with the exception of the bill language allowing discrimination in employment based on religion. The substitute bill would have struck Title II (the section proposing state demonstration projects). The Miller amendment failed by a vote of 200-229.

H.R. 2210 as passed would authorize an appropriation for Head Start in FY2004 of \$6.87 billion, and such sums as necessary in fiscal years 2005-2008. If appropriated, this would reflect a \$200 million increase above the FY2003 funding level of \$6.67 billion. The President's budget request for FY2004 includes \$6.816 billion for Head Start, which is \$54 million less than the amount H.R. 2210 would authorize.

Major features of the bill's Title I ("Program Improvements") include: increased credentials for Head Start teachers; a 2% *cap* on the percentage of funds to be reserved for training and technical assistance (under current law, the *floor* is set at 2%); increased requirements to promote collaboration and coordination among early childhood programs; a 60% set-aside of excess appropriation funds for quality improvement; a requirement that at least 10% of the total Head Start appropriation be reserved for Early Head Start; and new language that would explicitly allow faith-based Head Start programs to discriminate in hiring, based on religion (Sec. 116).

The proposal to increase credentials for Head Start teachers would require that by 2008, 50% of Head Start teachers have a B.A. or advanced degree in early childhood education. (Current law requires that 50% of Head Start teachers nationwide have an A.A. or above in early childhood education by 2003. That requirement was met.) In addition, within 3 years after the date of enactment, this

legislation would require that the Secretary require all Head Start teachers in center-based programs, hired following the date of enactment, to have an A.A. degree or above in early childhood education, or be enrolled in a program of study leading to an A.A. degree in early childhood education, with an agreement to complete the program within 3 years of being hired.

Title II (“State Demonstration Program”) of the bill contains provisions that would allow up to eight qualifying states to participate in “state demonstration programs” in which their allocation of federal Head Start funding would be administered by the state (as opposed to current law’s system of direct federal to local grantees). To qualify, a state must have an existing state-supported system of public-pre-kindergarten; standards for school readiness that are aligned with state kindergarten through twelfth grade; prior year state and local spending at a level of at least 50% of the federal Head Start funds to be allocated to the state; and an established “means” for interagency coordination and collaboration. States would need to demonstrate that their standards “generally meet or exceed the standards that ensure the quality and effectiveness of programs operated by Head Start agencies.”

A local grantee currently receiving funds would continue to receive funds, from the participating state, for at least three years after that state receives approval to participate in the program (assuming the grantee has no uncorrected deficiencies identified in monitoring reports from the most recent 5-year period).

Head Start Coordination and School Readiness Act (S. 1483) – introduced (Dodd). This bill to reauthorize Head Start was introduced by Senator Dodd on July 29, 2003. Unlike the House bill, S. 1483 does not provide any state the option to administer the Head Start program. Included in the bill are provisions to require expanded coordination and collaboration among Head Start and other agencies, and to provide funding for doing so. The bill would establish state Head Start Quality Improvement and Collaboration (HSQIC) Offices, expanding the functions of state Head Start Collaboration Offices. The HSQIC Offices would work in consultation with State advisory councils (also newly defined in the bill) to improve coordination among programs, and to plan for a state system of training and technical assistance. Advisory councils would be composed of representatives from a wide range of early childhood programs, agencies and organizations in the state, including Head Start.

The bill would authorize \$8.570 billion for FY2004, \$10.445 billion for FY2005, \$12.384 billion for FY2006, \$14.334 billion for FY2007, and \$16.332 billion for FY2008.

Under this bill, center-based Head Start program classrooms would be required within eight years (at most) to have at least one teacher with a B.A. degree in early childhood education (or an advanced degree in related field). Like the House bill, this bill proposes that within 3 years of enactment, the Secretary of HHS would require that newly hired Head Start teachers (for center-based programs) have an A.A., B.A. or advanced degree in early childhood education, or be currently enrolled (or enrolled within a year) in an associate degree program in early childhood education. S. 1483 would authorize new additional funding to be used to meet the

increased staff qualification requirements: \$387 million for FY2004, rising to \$841 million for FY2008.

Other Head Start Legislation. Several Head Start bills of narrower scope than the reauthorization bills outlined above have been introduced this Congress. **S. 1474 (Alexander)**, The Head Start Centers of Excellence Act of 2003, would establish grant programs to fund 200 Head Start agencies designated by HHS as “Centers of Excellence in Early Childhood.” This bill would also award grants to states to establish state councils that would identify barriers to, and opportunities for, coordination and collaboration among early childhood programs. **S. 1444 (Harkin)** would gradually increase the set-aside for Early Head Start to 20% in FY2008. The overall authorization of appropriations for FY2003-2008 would be set at “such sums as may be necessary.” **H.R. 2543 (Berkley)** would amend the Head Start Act to provide additional funding for states with increased numbers of Head Start-eligible children. **S. 1469 (Bangemann)** would amend the Head Start Act to provide grants to Tribal Colleges and Universities to increase the number of post-secondary degrees in early childhood education and related fields earned by Indian Head Start agency staff. **H.R. 2291 (Dallier)/S. 140 (Einstein)** would amend the Higher Education Act to extend loan forgiveness for certain loans to Head Start teachers.

1998 Reauthorization. Although Head Start has traditionally enjoyed widespread support, the program has not been without criticism. Concern has been expressed about the quality of services and the program’s potential for sustaining positive effects over the long-term. The 1998 amendments to Head Start, included in the legislation preauthorizing the program in 1998, continue to emphasize the need for quality improvement.

The 1998 reauthorization law (P.L. 105-285) increased the amount of new appropriations that must be used for quality improvement activities, at least until FY2003, and slows the pace at which the program can expand. The law requires HHS to develop specific education performance standards, and establishes teacher and staff training related to these standards as a priority use of quality improvement funds. The law encourages payment of higher salaries for staff with higher levels of education and training, and requires every Head Start classroom to have a teacher with demonstrated competency to perform certain functions related to school readiness and child development. The legislation also requires that, by September 30, 2003, half of all Head Start teachers nationwide must have at least an associate, bachelors, or graduate degree in early childhood education or development, or in a related field with experience teaching preschool children. According to HHS Head Start Program Information Report (PIR) data, this requirement was met in the 2002 program year, reaching just over 50% — up from 37% holding a postsecondary degree in 1999. The law further requires HHS to develop results-based performance measures, and to review the effectiveness of individual programs in meeting those measures.

Long-Term Benefits. During the 1998 reauthorization of Head Start, several congressional committees expressed interest in a rigorous evaluation component for Head Start. While there is widespread agreement that Head Start produces significant short-term gains, there continues to be disagreement over the program’s long-term benefits. Several studies in the 1980s and early 1990s found a “fade-out”

of Head Start benefits for children during their later school years, but some researchers have questioned whether this apparent fade-out was due to the children's preschool experience or the poor quality of the schooling they later received. A 1995 report by the Packard Foundation presents evidence that high-quality early childhood education for low-income children, including Head Start, does produce long-term educational, economic, and societal gains.⁶ Head Start programs included in the review generally showed significant favorable effects on grade retention and special education placement. Multi-service Head Start programs did not fare as well as better-funded public preschool programs in overall effectiveness measures, although the report noted that Head Start participants tend to be more disadvantaged, so that comparisons could be affected by preexisting conditions.

GAO published a Head Start literature review in 1997, in which it concluded that an extensive body of literature exists, but the research is inadequate to draw conclusions about the impact of Head Start on a national basis (*Head Start: Research Provides Little Information on Impact of Current Program*, HEHS-97-59, April 1997). GAO noted that most of the studies were on cognitive outcomes and did not evaluate such program components as nutrition or health-related services. Moreover, the quality of some of the research was poor and none of the studies used a nationally representative sample that would enable conclusions to be drawn about the national program. However, GAO pointed out that HHS currently has a variety of research and evaluation activities underway that will eventually produce information about the program's impact.

The 1998 amendments to Head Start mandate and reserve funds for additional studies on the impact of Head Start. The law also requires all Head Start agencies to coordinate with the local education agency and community schools, to develop procedures for the transition of Head Start children into kindergarten and elementary school. The law also requires HHS to provide technical assistance to Head Start programs to help ensure school readiness of children and to promote family literacy.

FACES and Head Start Impact Study. Two evaluation efforts underway which are designed to measure the effectiveness of the Head Start program are the Family and Child Experiences Survey (FACES) and the National Impact Study.

FACES, initially launched in 1997 (with the most recent cohort starting in Fall of 2000), is a periodic, longitudinal study of successive nationally representative samples of children and families in Head Start programs. The purpose of the study is to provide descriptions of the cognitive, social, emotional, and physical development of Head Start children; the characteristics, well-being, and accomplishments of families; the observed quality of Head Start classrooms; and the characteristics, needs, and opinions of Head Start teachers and other program staff. Children and parents are studied at entry into the program, followed for one or two

⁶ The Future of Children, *Long-term Outcomes of Early Childhood Programs*, The David and Lucille Packard Foundation, Winter 1995. (Available via the web at: [http://www.futureofchildren.org/pubs-info2825/pubs-info.htm?doc_id=77657])

years of program participation, and followed-up at the end of the child's kindergarten year.⁷

The National Impact Study, mandated by the 1998 reauthorization law (P.L. 105-285), began in FY2001, and is designed to provide a national analysis of the impact of Head Start on the development and school-readiness of low-income children. The HHS study requires random assignment of children to Head Start and non-Head Start groups, with attention being paid to the type and quality of other care and services that the control group receives. Data collection began in the Fall of 2002, and results of the study are not expected until 2006.

Coordination with Child Care. Particularly in light of welfare reform requirements instituted in 1996, which have caused more parents to work or participate in training activities, Head Start is working to respond to the needs of families for full-time child care. In recent years, HHS has used some of the Head Start expansion funds to build partnerships with child care providers to deliver full-day, full-year services. The 1998 amendments also were intended to encourage collaboration between child care and Head Start and to promote the development of unified early education and child care plans that will increase the availability of full-time services. The law authorizes the Secretary of HHS to provide supplemental collaboration funds to states that undertake such unified planning or other innovative collaborative initiatives.

The 1998 amendments also direct the Secretary to identify barriers to collaboration and to develop a mechanism for resolving programmatic conflicts, and to provide technical assistance related to the provision of full-day, full-year services. In addition, factors to be considered in awarding Head Start expansion grants, under the 1998 amendments, include the applicant's ability to coordinate with other community child care providers and preschool programs to provide full-day, full-year services. Moreover, the law authorizes Head Start agencies to charge fees for extended-day services provided to children, if necessary as part of a collaboration with another agency.

Table 3. Head Start FY2003 State Allocations (Estimates)

State	Amount	State	Amount
Alabama	\$102,170,000	Nevada	20,184,000
Alaska	12,348,000	New Hampshire	13,119,000
Arizona	98,863,000	New Jersey	127,694,000
Arkansas	62,252,000	New Mexico	50,175,000
California	817,556,000	New York	426,655,000
Colorado	67,038,000	North Carolina	135,337,000
Connecticut	50,990,000	North Dakota	16,359,000
Delaware	12,534,000	Ohio	241,768,000
District of Columbia	24,576,000	Oklahoma	78,457,000
Florida	257,448,000	Oregon	58,254,000
Georgia	164,995,000	Pennsylvania	223,524,000
Hawaii	22,419,000	Puerto Rico	239,018,000
Idaho	22,099,000	Rhode Island	21,611,000
Illinois	265,008,000	South Carolina	80,086,000
Indiana	90,451,000	South Dakota	18,442,000
Iowa	50,491,000	Tennessee	114,604,000
Kansas	48,873,000	Texas	463,434,000
Kentucky	105,555,000	Utah	37,000,000
Louisiana	137,766,000	Vermont	13,285,000
Maine	27,198,000	Virginia	97,285,000
Maryland	76,437,000	Washington	99,204,000
Massachusetts	106,278,000	West Virginia	49,603,000
Michigan	229,824,000	Wisconsin	88,690,000
Minnesota	71,045,000	Wyoming	12,122,000
Mississippi	158,384,000	Virgin Islands	10,077,000
Missouri	115,535,000	Outer Pacific	15,244,000
Montana	20,522,000	American Indian	185,452,000
Nebraska	35,276,000	Migrant Programs	263,002,000
