Latin America and the Caribbean: Fact Sheet on Economic and Social Indicators

Julissa Gomez-Granger
Information Research Specialist
Knowledge Services Group

This fact sheet tracks selected economic and social development indicators for Latin American and Caribbean countries. It also classifies country economies by income. The tables (**Table 1** and **Table 2**) show the most recent data available at the time of printing from the World Bank, the United Nations Development Programme (UNDP), Economist Intelligence Unit (EIU), and the U.S. Department of State. This fact sheet will be updated annually.

Sources: Area and population statistics from the U.S. Department of State, *Country Background Notes*; GNI and GNI per capita are from the World Bank, *World Development Report 2008*; life expectancy at birth, adult literacy rate, and human development rank are from the United Nations Development Programme (UNDP), *Human Development Report 2007/2008*.

- a. HDI rank is determined by using UNDP's human development index (HDI), which measures the average achievements in a country in three basic dimensions of human development: a long and healthy life (measured by life expectancy), being educated (measured by adult literacy and enrollment at the primary, secondary, and tertiary level), and a decent standard of living (measured by purchasing power parity, PPP, income). It is calculated for 177 countries and areas for which data are available.
- b. GDP from *Country Report Bahamas*, October 2007, Economist Intelligence Unit.
- c. Estimated to be high income (\$11,116 or more), *World Development Report 2008*.
- d. GDP from World Bank development indicators.
- e. GDP from *Country Report Cuba*, January 2008, Economist Intelligence Unit estimate.
- f. Estimated to be lower middle income (\$906-3,595), *World Development Report 2008*.
