Summary

Congressional inaction on climate change has led various entities to pursue climate change measures off Capitol Hill. Either in hopes of realizing substantive measures or to pressure Congress to act, such entities have looked to international forums, treaty negotiations, Environmental Protection Agency (EPA) action under the Clean Air Act, state and regional efforts, and—the topic here—lawsuits seeking to establish climate change impacts as a common law nuisance. If congressional efforts to block or delay EPA from addressing greenhouse gas (GHG) emissions are successful, that likely will give added importance to such nuisance suits. As background, a *private* nuisance is a substantial and unreasonable invasion of another's interest in the private use and enjoyment of land, without involving trespass; a *public* nuisance is an unreasonable interference with a right common to the general public.

In litigating a climate-change/nuisance suit, several issues arise at the outset and, if resolved against the plaintiff, prevent a claim from proceeding. First, there is the question whether the federal common law of nuisance has been displaced yet by EPA regulation of GHG emissions under the Clean Air Act. A second threshold issue is standing to sue, which asks whether a given party is an appropriate one to invoke the jurisdiction of a federal court. As developed by the Supreme Court, the Constitution requires that for a plaintiff to have standing in federal court, he/she must show injury in fact, that the injury was caused by the defendant, and that the remedy sought likely will ameliorate the injury. Suits seeking relief based on climate change claims have run into difficulty with one or more of these requirements. A third threshold issue is the political question doctrine, which is designed to restrain the judiciary from inappropriately interfering in matters reposed in the other branches of government. For example, the defendants in one case argued that one indicium of a political question—the Constitution's textual commitment of the issue to the executive or legislative branch—is displayed by climate change because using a nuisance case to reduce U.S. CO₂ emissions undermines the President's constitutional authority to manage foreign relations—in particular, to induce other nations to reduce *their* CO₂ emissions.

There are five common law/nuisance suits addressing climate change now or formerly active. Of the two no longer active, neither was successful. Of the three still-active cases, one has recently leaped to center stage because the Supreme Court agreed to hear it. In *Connecticut v. American Electric Power Co., Inc.*, eight states sued five utility companies alleged to be emitting the most GHGs in the nation through their coal-fired electric power plants. Following a Second Circuit decision, the Supreme Court agreed on December 6, 2010, to resolve threshold issues in this case.

The other two active cases are (1) *Comer v. Murphy Oil USA*, a suit against certain oil, coal, and chemical companies in Mississippi arguing that their GHG emissions contributed to making Hurricane Katrina more severe and thus damaged plaintiffs' property (now before the Supreme Court on a mandamus petition challenging the Fifth Circuit's dismissal of the appeal based on the circuit's lack of a quorum); and (2) *Native Village of Kivalina v. ExxonMobil Corp.*, in which a coastal Eskimo village sued 24 oil and energy companies, claiming that the large quantities of GHGs they emit contribute to climate change, which is causing coastal erosion that will require relocating the village (now pending before the Ninth Circuit). The fortunes of *Comer* and *Native Village of Kivalina* may well be affected by the Supreme Court decision in *Connecticut*.

I. Introduction

Congressional inaction on climate change has led various entities to pursue climate change measures off Capitol Hill. Either in hopes of realizing substantive measures or to pressure Congress to act, such entities have looked to international forums, treaty negotiations, Environmental Protection Agency (EPA) action under the Clean Air Act, state and regional efforts, and—the topic here—common law suits, principally seeking to establish climate change impacts as a nuisance.

Many argue that courts will (and should) be unreceptive to dealing with a global problem such as climate change through individual common law suits.¹ Each suit, after all, brings before the court only a handful of defendants representing a tiny fraction of the problem. As well, nuisance law offers no clear standards to apply, asking courts, for example, to weigh vague policy factors. This is a recipe, it is argued, for inconsistent and confusing results from different courts. Questions of causation are also substantial: even if the court accepts that man-made greenhouse gas (GHG) emissions contribute to climate change, how can a plaintiff show that a particular adverse impact was caused by climate change, and further was caused by the GHG emissions of the defendants? And should the defendants' contribution to worldwide GHG emissions be viewed as *de minimis*—too small for a court to bother with? Questions of remedy are likely to be particularly intractable: what amount of emission reduction, or monetary compensation, should be required of a defendant given the likely miniscule fraction of worldwide GHG emissions contributed by that defendant? Finally, the law affords courts several easy ways of blocking nuisance-based climate change litigation, discussed in Part II, should courts decide it is inappropriate. At a minimum, no one argues that piecemeal litigation is preferable to a coherent legislative scheme.

Nonetheless, common law/climate change lawsuits have their defenders, as long as Congress does not enact legislation.² Plaintiffs argue with some merit that the kinds of harm attributed to climate change—ecosystem and weather modifications, increased flooding, and harm to human health—are all harms traditionally covered by nuisance doctrine. Moreover, if Congress succeeds in barring or postponing EPA regulatory action against GHG emissions under the Clean Air Act (as seems more likely in light of the November 2010 elections), the nuisance lawsuit option will gain added attention. Nor can the possibility that nuisance plaintiffs will prevail in some limited way be ruled out, though none has succeeded thus far. Five nuisance actions involving GHG emissions have been filed, of which three are still active.

Doubtless there is fascination in efforts to enlist a doctrine as ancient as nuisance to deal with a problem as contemporary as climate change. By way of background, nuisance law is centuries old, born in the medieval English courts. Nor has it ever been used to tackle a problem anywhere

¹ See, e.g., Daniel A. Farber, *Basic Compensation for Victims of Climate Change*, 155 U. Pa. L. Rev. 1605, 1649 (2007) (“Realistically, the greatest function of litigation may be to prod legislative action.”). See also Jim Gitzlaff, *Getting Back to Basics: Why Nuisance Claims Are of Limited Value in Shifting the Costs of Climate Change*, 39 *Envtl. L. Rptr.* 10,218 (March 2009).

near as complex as climate change. A nuisance may be either a private nuisance or a public nuisance. An activity constitutes a *private* nuisance if it is a substantial and unreasonable invasion of another's interest in the private use and enjoyment of land, without involving trespass.³ Private nuisance actions are brought by the aggrieved landowner. An activity is a *public* nuisance if it creates an "unreasonable" interference with a right common to the general public.⁴ Unreasonableness may rest on the activity significantly interfering with, among other things, public health and safety. Public nuisance cases are usually brought by the government rather than private entities, but may be brought by the latter if they suffer special injury.⁵

Part II of this report notes the recurring threshold issues raised by the use of nuisance law to deal with GHG emissions and climate change. Part III reviews the five nuisance cases filed to date attacking GHG emissions and/or climate change impacts. As mentioned, none of these cases has generated a final decision for plaintiffs as yet. Note in particular that the Supreme Court on December 6, 2010, granted certiorari in *Connecticut v. American Electric Power Co., Inc.*, instantly propelling this case to center stage and raising major implications for the other two active cases.

II. Recurring Issues

As the court decisions in Part III show, the use of nuisance actions to address GHG emissions presents the plaintiff with daunting hurdles—each of which must be surmounted at the outset of the litigation if it is to proceed.⁶ Following is a brief introduction to the most salient of these threshold hurdles.

A. Federal Common Law

Because GHG emissions obviously move across state lines, a *federal* common law of nuisance seems likely to govern. However, the scope of federal courts' authority to develop their own common law, as state courts routinely develop state common law, has long been under Supreme Court scrutiny. Though the Court announced that it disfavored federal courts developing their own common law 72 years ago,⁷ lower federal courts have continued to do precisely that in areas of national concern, in the absence of an applicable act of Congress. Many federal courts have decided challenges to interstate pollution based on the federal common law of nuisance, which generally hews to the same definitions of nuisance as the state cases.

Most important here, federal common law remedies are vulnerable to being displaced ("preempted") by acts of Congress. Federal common law, says the Supreme Court, is a "necessary expedient," and "when Congress addresses a question previously governed by a decision rested

³ RESTATEMENT (SECOND) OF TORTS § 821D (1979).

⁴ *Id.* at § 821B.

⁵ To have suffered "special injury," a person must have incurred a different kind of interference than that suffered by the public at large, not just a greater harm from the same kind of interference. *Id.* at § 821B comments b. and d.

⁶ See generally Kevin A. Gaynor et al., *Challenges Plaintiffs Face in Litigating Federal Common Law Climate Change Claims*, 40 *Env'tl. L. Rptr. (News and Analysis)* 845 (Sept. 2010); Thomas W. Merrill, *Global Warming as a Public Nuisance*, 30 *Colum. J. Env'tl. L.* 293 (2005).

⁷ *Erie R. Co. v. Tompkins*, 304 U.S. 64, 78 (1938) (holding that "[t]here is no federal general common law"; federal courts must apply the law of the relevant state except in matters governed by federal statute or the Constitution).

on federal common law the need for such an unusual exercise of lawmaking by federal courts disappears.”⁸ Otherwise put, “new federal laws and new federal regulations may in time pre-empt the field of federal common law of nuisance.”⁹ Thus, a question in some of the climate change cases has been whether the federal Clean Air Act displaces judge-made federal common law in the climate change area. The displacement argument was strengthened by the Supreme Court’s 2007 decision in *Massachusetts v. EPA*,¹⁰ holding that EPA has authority under the Clean Air Act to regulate GHG emissions. It was strengthened further by EPA’s promulgation under the Clean Air Act of GHG-limiting regulations to take effect January 2, 2011.¹¹ Additional developments regarding the displacement question are discussed in Part III in connection with the Supreme Court’s grant of certiorari in *Connecticut v. American Electric Power Co., Inc.*

If the federal common law of nuisance is deemed preempted, the state common law of nuisance may be applicable,¹² though there are substantial inefficiencies to having to file suit in multiple states.

B. Standing

The standing inquiry asks whether a given party is an appropriate one to invoke the jurisdiction of a federal court. Only a party with standing can bring suit in federal court. As developed by the Supreme Court, standing has constitutional and prudential (court-created) components. The constitutional side stems from the limitation of federal court jurisdiction in Article III of the Constitution to “Cases” and “Controversies.” As explicated by the Court, this constraint demands that a plaintiff in federal court demonstrate that (1) he/she has been or imminently will be injured in a way that is concrete and particularized, and not speculative; (2) the injury is or will be caused by the defendant; and (3) there is a likelihood that the injury will be redressed by a favorable court decision.¹³

One can see readily that a suit seeking relief from climate change impacts may run into difficulty with each of the three constitutional standing requirements. For example, climate change modeling generally predicts only large-scale effects, allowing defendants to argue in many cases that the particular injury suffered by plaintiff was not shown to have been caused by climate change. Or that the defendants’ GHG emissions were (or will be) at best a *de minimis* contributor to the injury. The third, redressability prong of standing suggests that plaintiffs seeking injunctive relief from a small number of GHG emitters may have a tougher time establishing standing than

⁸ *Milwaukee v. Illinois*, 451 U.S. 304, 314 (1980) (“*Milwaukee II*”).

⁹ *Illinois v. Milwaukee*, 406 U.S. 91, 107 (1972) (“*Milwaukee I*”). Indeed, there is a presumption in favor of preemption. *Matter of Oswego Barge Corp.*, 664 F.2d 327, 335 (2d Cir. 1981).

¹⁰ 549 U.S. 497 (2007).

¹¹ 75 Fed. Reg. 25,323 (May 7, 2010) (EPA GHG emission standards for new light-duty motor vehicles, promulgated jointly with the National Highway Traffic Safety Administration’s revised Corporate Average Fuel Economy standards for the same vehicles); 75 Fed. Reg. 31,514 (June 3, 2010) (EPA’s Clean Air Act “tailoring rule” limiting New Source Review of new and modified stationary sources of GHG emissions and limiting Clean Air Act Title V permitting requirements).

¹² *International Paper Co. v. Ouellette*, 479 U.S. 481 (1987) (although federal common law of interstate water pollution was preempted by *Milwaukee II*, state common law applied to Vermont citizens’ suit against a New York paper company for pollution of Lake Champlain). Federal and state common law of nuisance cannot apply simultaneously. See *Milwaukee II*, 451 U.S. at 314 n.7 (“if federal common law exists, it is because state law cannot be used”).

¹³ See, e.g., *Lujan v. Defenders of Wildlife*, 504 U.S. 555, 560-561 (1992).

those seeking monetary damages to pay for the costs of responding to climate change; the latter remedy is more likely to “redress” the harm.

Note that state plaintiffs may have a choice. They may bring suit as owner of natural resources or other property, in which case they face the same standing requirements as private entities, described above. Alternatively, states may sue in their *parens patriae* capacity—that is, as protector of their quasi-sovereign interests—in which case the Article III requirement is differently stated. For *parens patriae* standing, a state must articulate a quasi-sovereign interest—that is, one apart from the interests of particular private parties. A state’s interest in the “health and well-being—both physical and economic—of its residents in general,”¹⁴ if a substantial portion of those residents is affected, is a well-established quasi-sovereign interest.¹⁵ Owing to these quasi-sovereign interests, the Court has said recently (in its only climate change case) that states are “not normal litigants for purposes of invoking federal jurisdiction,” but rather face a lower standing threshold.¹⁶

As noted, standing doctrine has a prudential component as well as a constitutional one. Principles of prudential standing are not dictated by Article III; rather, they are “judicially self-imposed limits on the exercise of federal jurisdiction.”¹⁷ One such principle is “the rule barring adjudication of generalized grievances more appropriately addressed in the legislative branches.”¹⁸ Plainly this may be a concern with cases alleging climate change injuries, at least where such injuries are not concrete and personal.¹⁹

C. Political Question Doctrine

A federal court will refuse to resolve a case it regards as presenting a “political question,” owing to the separation of powers in the Constitution.²⁰ Political question doctrine is “designed to restrain the Judiciary from inappropriate interference in the business of the other branches of Government.”²¹ Long ago, Chief Justice John Marshall wrote: “[q]uestions, in their nature political, or which are, by the constitution and laws, submitted to the executive, can never be made in this court.”²²

Deciding whether a matter has been committed by the Constitution to a nonjudicial branch of government is, however, a “delicate exercise,”²³ and is decided on a case-by-case basis. The

¹⁶ *Massachusetts v. EPA*, 549 U.S. 497, 518 (2007).

¹⁷ *Elk Grove Unified School Dist. v. Newdow*, 542 U.S. 1, 11 (2004), quoting *Allen v. Wright*, 468 U.S. 737, 751 (1984).

¹⁸ *Elk Grove Unified School Dist.*, 542 U.S. at 12.

¹⁹ The Supreme Court has expressly rejected the argument that just because climate change causes widespread harm, standing doctrine presents an insurmountable obstacle to establishing federal jurisdiction. But “[w]hile it does not matter how many persons have been injured by the alleged action [being challenged], the party must show that the action injures him in a concrete and personal way.” *Massachusetts v. EPA*, 549 U.S. 497, 517 (2007), quoting *Lujan v. Defenders of Wildlife*, 504 U.S. 555, 581 (1992) (Kennedy, J., concurring).

²⁰ *Baker v. Carr*, 369 U.S. 186, 210 (1962). See also *Massachusetts*, 549 U.S. at 516.

²¹ *United States v. Munoz-Flores*, 495 U.S. 385, 394 (1990).

²² *Marbury v. Madison*, 5 U.S. (1 Cranch) 137, 170 (1803).

²³ *Baker*, 369 U.S. at 211.

factors indicating a non-justiciable political question were famously stated by the Supreme Court in *Baker v. Carr* in 1962.²⁴ *Baker* stated six factors, of which the first three have played a role in the climate-change nuisance cases:

Prominent on the surface of any case held to involve a political question is found [(1)] a textually demonstrable constitutional commitment of the issue to a coordinate political department; or [(2)] a lack of judicially discoverable and manageable standards for resolving it; or [(3)] the impossibility of deciding [the issue] without an initial policy determination of a kind clearly for nonjudicial discretion....

For example, the utility defendants in *Connecticut v. American Electric Power Co., Inc.*, discussed below, argued that the first factor—textually demonstrable constitutional commitment of the issue to the executive or legislative branch—was triggered because using a nuisance case to reduce U.S. emissions of CO₂ (the major GHG) would interfere with the President’s authority to manage foreign relations. One reason: unilateral reductions of U.S. CO₂ emissions would hinder the President’s efforts to induce other nations to reduce their emissions.²⁵

Yet *Baker* made clear it was setting a high threshold for nonjusticiability. Unless one of the six factors is “inextricable” from the case, *Baker* said,²⁶ the case should not be dismissed on political question grounds. A political question case, it said, is different from one that is political merely in the sense that it involves an issue being intensely debated in the political realm.²⁷ Since *Baker* was decided almost a half-century ago, the Court has found few issues to present political questions, but the doctrine has been ubiquitous in the nuisance/climate change litigation.

III. Nuisance Actions Thus Far

A. Active Cases

1. Second Circuit: *Connecticut v. American Electric Power Co., Inc.*

Eight states, New York City, and three private land trusts brought nuisance actions, later consolidated, against five electric utility companies—chosen as allegedly the nation’s largest emitters of CO₂, the major GHG, through their fossil-fuel electric power plants. Plaintiffs sought to require the electric utilities to abate their contribution to the nuisance of climate change by reducing their CO₂ emissions. No precise amount of emissions reduction was specified. They cited both the federal common law of nuisance, and, in the alternative, state common law and statutory nuisance law.

In 2005, the federal district court held that because resolving the issues in the case required a balancing of economic, environmental, foreign policy, and national security interests, the court needed guidance from the political branches.²⁸ The absence of such guidance (there being no

²⁴ 369 U.S. 186, 216 (1962).

²⁵ 582 F.3d 309, 324 (2d Cir. 2009).

²⁶ *Baker*, 369 U.S. at 217.

²⁷ *Id.* See also U.S. Dep’t of Commerce v. Montana, 503 U.S. 442, 458 (1992).

²⁸ 406 F. Supp. 2d 265 (S.D.N.Y. 2005).

federal regulation of CO₂ as of 2005) meant to the court that the case satisfied one of the factors identified in *Baker v. Carr* as indicating a political question—namely, the case was “impossib[le] [to] decid[e] without an initial policy determination of a kind clearly for nonjudicial discretion.” So the suit was dismissed.

Plaintiffs’ appeal to the Second Circuit was notable in part because then-judge Sonia Sotomayor was on the three-judge panel that heard oral argument. Her later nomination to the Supreme Court while the case was under consideration by the panel ended her involvement in the case. The remaining judges on the panel, however, elected not to rehear the case with a new third judge. Instead, they held in 2009 that the district court had erred when it dismissed the case on political question grounds.²⁹ Where a case appears to be “an ordinary tort suit,” the court said, there is no “impossibility of deciding without an initial policy determination of a kind clearly for nonjudicial discretion.”³⁰

Additionally, the circuit court found that all plaintiffs had standing, and that all may properly maintain actions under the federal common law of nuisance. Finally, the circuit court held that the federal common law of nuisance had not been displaced by the regulatory scheme established under the Clean Air Act as of the date of decision,³¹ or by the collective force of various other statutes touching in some way on GHGs or climate change (e.g., the National Climate Program Act of 1978).³²

The Supreme Court granted certiorari on December 6, 2010, to resolve the three threshold issues addressed by the Second Circuit³³—the three threshold issues discussed in Part II of this report. As described by petitioners (defendants below), the issues presented to the Court are (1) whether plaintiffs have standing to seek judicially fashioned emissions caps for the utilities’ contribution to climate change, (2) whether a cause of action to cap CO₂ emissions exists under federal common law in light of the Clean Air Act assigning responsibility for regulating such emissions to EPA, and (3) whether plaintiffs’ claims are governed by “judicially discoverable and manageable standards” or could be resolved without “initial policy determination[s] of a kind clearly for nonjudicial discretion” (the second and third *Baker v. Carr* factors indicating a political question).

It has not escaped attention that the Court’s grant of certiorari came despite the presence of several factors often leading it to pass up a case. There was no split in the circuits;³⁴ the decision below was interlocutory (it did not finally resolve the case); and subsequent developments might have made Court intervention unnecessary (upcoming EPA regulation of GHG emissions on January 2, 2011, might lead the district court to find the federal common law claims displaced).³⁵

²⁹ 582 F.3d 309 (2d Cir. 2009).

³⁰ *Id.* at 331.

³¹ The court warned that the question whether the federal common law of nuisance had been displaced might be answered differently at some future time when EPA actually regulates GHG emissions under the Clean Air Act. On January 2, 2011, that future time will arrive. *See* note 11 *supra* and accompanying text.

³² Because the court approved the federal common law of nuisance claims, it chose not to adjudicate the alternative state-law nuisance claims.

³³ No. 10-174. The name of the case in the Supreme Court is *American Electric Power Co., Inc. v. Connecticut*.

³⁴ However, petitioners point out in their reply brief that the Second Circuit decision is at odds with all the *district court* climate change decisions.

³⁵ *See* note 11 *supra* and accompanying text. To the displacement argument, the state plaintiffs respond that the new EPA regulations will not preempt federal common law applicable to the coal-fired power *plants at issue in the lawsuit* (continued...)

Thus, it may be speculated that the grant of certiorari was motivated at least in part by the likely desire of the Court's conservatives to limit the broad reading of Article III standing in *Massachusetts v. EPA*,³⁶ the Court's 2007 climate change decision. Also favoring grant of certiorari was the fact that the United States filed a brief on behalf of the Tennessee Valley Authority, one of the utility defendants, on the side of the private-utility petitioners.

The Court's eventual decision, expected by June 2011, will almost certainly not reach the merits, but will likely confine itself to threshold issues. A win for the petitioners (utilities) on *any one* of the three threshold issues results in dismissal of the case—the utilities' desired result. By contrast, a win by the respondents (states and private land trusts) on *all three* threshold issues does not ensure an ultimate win for them—it simply means that the case goes back to the district court for a trial on, among other things, whether a nuisance exists. Note, too, that Justice Sotomayor recused herself, so that a 4-4 tie vote will result if the justices line up as they did in *Massachusetts v. EPA* in 2007 and Justice Kagen votes as did Justice Stevens, the Justice she replaced. A 4-4 vote results in affirmance of the Second Circuit decision.

Particularly interesting in the case before the Supreme Court is how EPA's GHG-related actions under the Clean Air Act *since* the Second Circuit's decision in 2009 (and further actions being discussed at the agency) will be seen to affect whether the federal common law of nuisance has been displaced. The Second Circuit explicitly noted this future possibility.³⁷ Not surprisingly, petitioners argue that EPA's actions do require displacement. On the other hand, any congressional action in the 112th Congress eliminating EPA authority to regulate GHG emissions, should it be enacted, might support an argument that federal common law has not been displaced.

2. Fifth Circuit: *Comer v. Murphy Oil USA*

In this asserted class action, owners of Mississippi Gulf coast property damaged by Hurricane Katrina sued certain oil, coal, and chemical companies doing business in the state under state law. They allege a multistep chain of causation—that the defendant companies emitted substantial amounts of GHGs, which contributed to global warming, which raised the sea level and made the waters of the Gulf of Mexico warmer, which caused Hurricane Katrina to hit the Gulf coast with greater ferocity, which increased the harm to plaintiffs' property caused by the hurricane. On this basis, plaintiffs asserted various state-law tort claims, including negligence, nuisance (public and private), and trespass, and seek compensatory damages. They also request punitive damages for gross negligence. Further, they claimed fraudulent misrepresentation and conspiracy to commit fraudulent misrepresentation, alleging that the oil and coal companies disseminated misinformation about global warming. Finally, plaintiffs made claims against their home insurance companies (e.g., breach of fiduciary duty claim for misrepresenting policy coverage, and violation of a state consumer-protection act) and their mortgage companies (arguing that they

(...continued)

because the new regulations target new and modified stationary sources of emissions, not the existing ones that are the basis of the suit. On the other hand, plaintiffs concede that if EPA were to adopt GHG emission standards for industry sectors such as coal-fired power plants (as it is reportedly considering), federal regulation *would* reach existing GHG emission sources and federal common law suits would have to be dismissed. See Gabriel Nelson, *EPA could end "nuisance" case, enviros tell Supreme Court*, E&E News PM (November 4, 2010).

³⁶ 549 U.S. 497 (2007). See four-Justice dissent by Chief Justice Roberts, joined by Justices Scalia, Thomas, and Alito, *id.* at 535.

³⁷ See note 31 *supra* and accompanying text.

may not claim sums owed by plaintiffs for the value of the mortgaged property that was uninsured).

In a succinct order with no discussion, the district court, sitting in diversity, dismissed the action in 2007 for lack of plaintiff standing.³⁸ The court also found plaintiffs' claims nonjusticiable under the political question doctrine.

In 2009, a three-judge panel of the Fifth Circuit reversed and remanded.³⁹ Relying heavily on the Supreme Court's approval of standing in *Massachusetts v. EPA*, the panel ruled that plaintiffs here similarly had Article III standing to assert their negligence, nuisance, and trespass claims. As in *Massachusetts*, at least at the pleading stage, the asserted chain of causation described above was not too attenuated. Plaintiffs, however, were held to lack standing as to their other claims. On the other major issue in the case, the circuit court held that the tort claims were not, contrary to the district court, barred by political question doctrine. This ruling on the political question argument came three weeks after the identical ruling by the Second Circuit in *Connecticut v. American Electric Power*, *supra*, though the Fifth Circuit seemed to be aware of only the district court decision in that case.

At this point, events took an odd turn. In early 2010, after vacating the panel ruling and taking the case *en banc*, the Fifth Circuit made the unusual announcement that it lacked a quorum, so the appeal had to be dismissed.⁴⁰ As the court explained, seven of the court's 16 active-duty judges had initially recused themselves, leaving only nine judges to rule on the *en banc* petition. Those judges had decided 6-3 to vacate the panel decision and grant *en banc* rehearing. Subsequently, one of those nine recused herself, leaving only eight judges in regular active service who were not disqualified to hear the case. Since the requisite quorum to proceed is a *majority* of the 17 authorized active-duty judges on the court (including one vacancy)⁴¹—that is, nine judges—the remaining eight judges concluded 5-3 they could not proceed with *en banc* review. Indeed, and more strikingly, they concluded they could not even reinstate the vacated panel decision.

The effect of this quorum ruling was to deny appeal of the district court decision (which the Fifth Circuit effectively reinstated). Arguing they have a statutory and constitutional right to have their appeal decided, the plaintiffs asked the Supreme Court on August 26, 2010, for a writ of mandamus.⁴² The writ would direct the Fifth Circuit to reinstate petitioners' appeal and return the case to the three-judge panel for adjudication. The Court has yet to rule.

3. Ninth Circuit: *Native Village of Kivalina v. ExxonMobil Corp*

An Inupiat Eskimo village on the northwest Alaska coast sued 24 oil and energy companies, claiming that the large quantities of GHGs they emit contribute to climate change. Climate change, the village contends, is destroying the village by melting Arctic sea ice that formerly protected it from winter storms, leading to massive coastal erosion that will require relocating the village's inhabitants at a cost of \$95 million to \$400 million. Plaintiffs invoke the federal

⁴¹ 28 U.S.C. § 46(c)-(d).

⁴² In re Ned Comer (No. 10-294).

common law of public nuisance, and state statutory or common law of private and public nuisance. They further press a civil conspiracy claim, asserting that some of the defendants have engaged in agreements to participate in the intentional creation or maintenance of a public nuisance—that is, global warming—by misleading the public as to the science of global warming. The suit seeks monetary damages.

In 2009, the district court held that the federal nuisance claim was barred by the political question doctrine (contrary to the Second Circuit’s holding in *Connecticut* nine days earlier) and, independently, for lack of Article III standing.⁴³ Accordingly, defendants’ motion to dismiss was granted. As to the political question issue, the court found that two *Baker* factors pointed to climate change presenting a political question. First, said the court, there is “a lack of judicially discoverable and manageable standards,” and second, a decision cannot be rendered “without an initial policy determination of a kind clearly for nonjudicial discretion.”

As for standing, the district court rejected plaintiffs’ argument that it was enough for them to establish that defendants “contributed to” their injuries. The court explained that in the absence of federal standards limiting GHG emissions, no presumption arises that any defendant’s actions harmed plaintiffs.⁴⁴ “Without that presumption, and especially given the extremely attenuated causation scenario alleged in Plaintiffs’ Complaint, it is entirely irrelevant whether any defendant ‘contributed’ to the harm.”⁴⁵ Nor, in view of the undifferentiated nature of GHG emissions from all global sources and their accumulation over long periods, is there any way to link any particular effect of climate change to a particular entity. Having dismissed the federal claim giving it original jurisdiction, the court declined to exercise its supplemental jurisdiction over the state law claims.

The village has appealed to the U.S. Court of Appeals for the Ninth Circuit.⁴⁶

B. Cases Finally Resolved

The following cases, in addition to being finally resolved, are the earliest filed in the nuisance/climate-change area.

1. Ninth Circuit: *California v. General Motors Corp.*

This action was filed by California against several automobile manufacturers based on the alleged contributions of their vehicles, through their GHG emissions, to climate change impacts in the state. The suit asserted that these impacts constitute a public nuisance under federal common law, and sought monetary damages (recall that *Connecticut v. American Electric Power* seeks injunctive relief).

In 2007, the district court dismissed the suit on a political-question rationale—namely, “the impossibility of deciding without an initial policy determination of a kind clearly for nonjudicial

⁴³ 663 F. Supp. 2d 863 (N.D. Cal. 2009).

⁴⁴ As to the “absence of federal standards,” this is due to change on January 2, 2011. See note 11 *supra* and accompanying text.

⁴⁵ *Id.* at 880.

⁴⁶ No. 09-17490.

discretion.”⁴⁷ The need for an “initial policy determination” by the political branches was supported, in the court’s view, by the complexity of the climate change issue, the need for political guidance in divining what is an “unreasonable” interference with the public’s rights (recall the definition of a public nuisance on page 2), and the global warming debate in the political branches. Ironically, the environmental “win” in *Massachusetts v. EPA* was cited by the court against the state, both because that decision found authority over GHG emissions to lie with the federal government and because it recognized a state’s standing to press its grievances at the federal level.

California appealed to the Ninth Circuit, but in 2009 motioned for voluntary dismissal, which the circuit granted. Dismissal was sought as part of an agreement between the state, the Obama Administration, and the automobile manufacturers.

2. Second Circuit: *Korsinsky v. U.S. EPA*

Mr. Korsinsky filed this *pro se* suit alleging, in a difficult-to-understand complaint, that GHG emissions, by contributing to climate change, and numerous other pollutants threatened his health due to his enhanced vulnerability as an older person with sinus problems. He appeared to be requesting an injunction ordering EPA to require less pollution and ordering polluters to use his invention for reducing CO₂ emissions. The district court dismissed for lack of standing, and the U.S. Court of Appeals for the Second Circuit affirmed on the same ground in 2006, explaining that plaintiff’s claim that global warming may cause him unspecified future injuries is “too speculative.”⁴⁸
