Introduction to Financial Services: Banking

Banks serve an important role in the financial system and broader economy. They aggregate the savings of households and businesses and lend to individuals, businesses, and federal and local governments. Economic output would be lower if, instead of banks, businesses had to finance investments themselves or individuals had to rely on their savings alone to make expenditures (e.g., home and car purchases). Banks also provide other important financial services, such as payment processing.

This In Focus reviews key concepts in banking, provides an overview of banking-related regulations and recent banking regulation, and highlights emerging policy issues.

Key Concepts in Banking

A *bank* generally refers to an institution that accepts deposits, makes loans, and processes payments, including commercial banks and thrifts (but generally not credit unions, which have a different ownership model). To accept deposits, an institution must have a federal or state charter. Bank deposits are generally insured by the federal government, subject to certain limits. Using customer deposits and other funding, banks generally make loans and acquire certain other assets.

Balance Sheet. An understanding of a bank's balance sheet—its assets, liabilities, and capital (equity)—provides the foundation for analyzing many banking issues. Loans made and securities owned by a bank typically comprise the majority of assets on a bank's balance sheet. To get the funding to make loans and acquire assets, banks use liabilities and capital. Customer deposits (e.g., checking and savings account deposits) and any debt that a bank issues (e.g., bonds, repurchase agreements) are liabilities of the bank, as the bank owes these funds to its customers and creditors. The difference between the assets and liabilities equals the bank's equity (assets - liabilities = equity). Equity can be thought of as the bank's ownership stake in the institution.

Deposit Insurance. Federal deposit insurance is intended to prevent bank runs and promote financial stability to the financial markets by guaranteeing individuals' bank deposits up to a \$250,000 account limit. Although the deposit insurance is funded by the industry, it is backed by the full faith and credit of the United States (and thus, ultimately by the taxpayers). The Federal Deposit Insurance Corporation (FDIC) insures bank deposits.

Overview of Regulation

Two major components of bank regulation are prudential and consumer compliance regulation.

Prudential. Prudential regulation (or "safety and soundness" regulation) is designed to promote bank

profitability and avoid bank failures, thereby protecting taxpayers and the stability of the financial system. A bank's charter type and corporate structure determine its primary federal prudential regulator (see **Table 1**). Banks are chartered and regulated as national banks under the authority of the Office of the Comptroller of the Currency (OCC) or as state banks under the authority of a state regulator. The Federal Reserve (Fed) and the FDIC regulate state banks in conjunction with state bank regulators. Most banks are owned by a parent company—called a bank holding company (BHC). Some BHCs have subsidiaries that engage in nonbank financial activities, such as underwriting and dealing in certain types of securities. The Fed is the primary regulator of BHCs.

Table 1. Primary Federal Depository Regulators

Regulator	Oversees
Office of the Comptroller of the Currency (OCC)	Nationally chartered banks and national thrifts
Federal Reserve (Fed)	Bank holding companies and Fed member state banks and thrifts
Federal Deposit Insurance Corporation (FDIC)	Non-Fed member state banks and thrifts
National Credit Union Administration (NCUA)	Federally chartered or insured credit unions

Capital and liquidity rules are important prudential regulation tools. Holding a high level of capital can make a bank's failure less likely, because capital can be written down to absorb losses. For this reason, banks are generally required to maintain sufficient levels of capital to ensure solvency and protect bank depositors and taxpayers. Banks need liquidity to meet short-term obligations. Thus, banks are generally required to hold liquid assets or use stable funding to ensure adequate liquidity.

Consumer Compliance. Consumer compliance regulations seek to ensure that banks conform to applicable consumer protection and fair-lending laws. The Consumer Financial Protection Bureau (CFPB), created by the Dodd-Frank Wall Street Reform and Consumer Protection Act (P.L. 111-203), is primarily responsible for issuing the rules that all banks must comply with. The CFPB is the primary supervisor for consumer compliance at banks with more than \$10 billion in assets. Prudential regulators are the primary supervisors for consumer compliance at banks with \$10 billion or less in total assets.

Recent Banking Legislation

Congress passed Dodd-Frank in response to the 2007-2009 financial crisis. This major response was arguably the most comprehensive financial reform legislation since the 1930s.

Debates have arisen over whether the benefits generated by the changes implemented under the act (e.g., greater financial stability and consumer protections) justify the costs (e.g., compliance costs to banks and reduced credit availability). To address concerns related to a perceived regulatory burden imposed on banks by Dodd-Frank, Congress passed the Economic Growth, Regulatory Relief, and Consumer Protection Act (P.L. 115-174) in 2018, which modified certain aspects of Dodd-Frank and bank regulation.

Policy Issues

Congress continues to debate whether policy responses to the 2007-2009 financial crisis and subsequent reform through P.L. 115-174 and regulation are appropriate. Other ongoing policy issues of interest to Congress are highlighted below.

COVID-19. To address concerns over bank and consumer financial health during the COVID-19 pandemic, Congress passed various legislation, including the CARES Act (P.L. 116-136) and the Consolidated Appropriations Act, 2021 (P.L. 116-260). These acts provided temporary relief for banks. Bank regulators also modified some of the regulations under existing authority to provide relief.

Large Bank Regulation. Dodd-Frank required the Fed to apply enhanced prudential standards (EPS) to BHCs with assets of \$50 billion or more. P.L. 115-174 raised that threshold to \$250 billion and granted the Fed discretion to determine which EPS are applicable to BHCs with \$100 billion to \$250 billion.

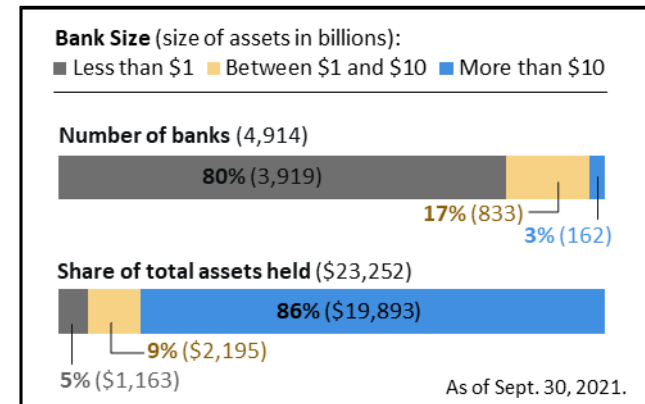

Market Concentration and Community Banks.

Community bank is not officially defined but generally refers to a small (though size is not necessarily a determining factor) bank that services the needs of a local area. Congress has shown considerable interest in the status of community banks. Bank consolidation has led to a high concentration of bank assets in a small number of larger banks, as shown in **Error! Reference source not found.** The number of smaller community banks has been in decline for decades. As of September 2021, there were 4,914 insured banks in the United States, down from a peak of 18,083 in 1986. The industry holds \$23,252 billion in assets, 86% of which is held by 162 of the largest banks, each of which had more than \$10 billion in assets. (The top 13 banks hold 55% of all assets.)

Several factors have contributed to bank consolidations in the past 35 years. The significant deregulation of interstate branch and banking restrictions in the 1980s and early 1990s played a role. Technological advances may have increased economies of scale in banking. Some have argued small bank regulatory burden is another factor, as smaller banks might have fewer resources to dedicate to compliance. Small banks are subject to fewer regulations than large banks, and P.L. 115-174 included provisions

providing targeted relief to banks below certain asset sizes. Some observers argue that tailoring regulations does not go far enough to relieve regulatory burden on small banks.

In the 117th Congress, some Members introduced the Bank Merger Review Modernization Act of 2021 (H.R. 5419 and S. 2882), which would amend bank merger processes and requirements. Similar bills were introduced in the 116th Congress. Among its provisions, the legislation would authorize the CFPB to deny bank merger applications if the new consolidated institution would not have adequate systems in place to ensure compliance with federal consumer laws. Other provisions would require the bank regulators to perform a cost-benefit analysis and consider competitive effects on the market and Community Reinvestment Act (CRA) performance.

Congress passed CRA (P.L. 95-128) to address a lack of lending in low-income neighborhoods. CRA requires regulators to evaluate how well banks are meeting credit needs in the areas where they function and consider those evaluations when banks want to operate in new areas.

Fintech. Financial technology, or “fintech,” usually refers to technologies with the potential to alter the way certain financial services are performed. Banks may enter into contracts with fintech companies to reach new markets or improve efficiency. Alternatively, banks may face potential competition from those companies, which may offer similar products but may not be subject to the same regulations as banks. Regulators are considering the extent to which certain fintech companies may be granted charters to operate as special purpose banks.
